Nine Crazy Ideas in Science Robert Ehrlich,2018-06-05 AIDS is not caused by HIV Coal and oil are not fossil fuels Radiation exposure is good for you Distributing more guns reduces crime These ideas make headlines but most educated people scoff at them Yet some of science s most important concepts from gravity to evolution have surfaced from the pool of crazy ideas In fact a good part of science is distinguishing between useful crazy ideas and those that are just plain nutty In this book a well known physicist with an affinity for odd ideas applies his open mind to nine controversial propositions on topical subjects Some it turns out are considerably lower on the cuckoo scale than others Robert Ehrlich evaluates for the general reader or student nine seemingly far out propositions culled from physics biology and social science In the process he demonstrates in easy to understand terms how to weigh an argument judge someone s use of statistics identify underlying assumptions and ferret out secret agendas His conclusions are sometimes surprising For instance he finds that while HIV does cause AIDS and the universe almost certainly started with a big bang our solar system could have two suns faster than light particles might exist and time travel can t be ruled out as mere science fiction Anyone interested in unorthodox ideas will get a kick out of this book And as a fun way of learning how to think like a scientist it has enormous educational value Of course only time will tell whether any of these nine ideas will be the next continental drift the now orthodox account of the Earth s geology that was for years just a crazy idea *ENC Focus* ,1994 **PowerGuide Logbook 2** Helen Lee,2002-02 Mazes word games spiritual journal pages puzzles and amazing facts **The Book Review** ,2005 *Library Media Connection* ,1998 **What's the BIG Idea?** Vicki Cobb,2013-09-01 Why don t we feel the Earth move Why does an ice cube float Why can t you unscramble an egg Why can t we live forever These are all questions that a curious kid might ask In What s the BIG Idea renowned juvenile science educator Vicki Cobb answers these and other fascinating questions to help kids learn more about the world through the wonders of science A big idea is one that has no simple or easy answer and there are four big ideas in this book motion energy matter and life The motion of nonliving objects rolling balls falling stones the moon and stars seems so ordinary and familiar that most people take it for granted Matter on the other hand comes in so many different forms solids liquids gases metals nonmetals living material that it is hard to imagine anything that all matter has in

common Energy is an idea that is in the news just about every day yet most people couldn't tell you what the big idea of energy is And life what life is seems mind boggling and infinitely complicated How do we bend our brains around it Scientists learn by asking questions And this book now in paperback is designed to make young readers stop and think about each of the questions before reading what scientists have learned that answers each question They'll be able to do simple things to see for themselves and they will build their own scientific knowledge in the process By the time they've finished this book they'll get the big picture of what science is all about American Book Publishing Record Cumulative 1998 R R Bowker Publishing,1999-03
