INSTALLATION LIMITATIONS & RECOMMENDATIONS

The general location of the air handler is normally selected by the architect, contractor and/or home owner for the most effective application and satisfaction. For proper installation the following items must be considered:

This equipment has been evaluated in accordance with the Code of Federal Regulations, Chapter XX, Part 3280 or the equivalent. "SUITABLE FOR MOBILE HOME USE"

1. If adequate power is available and correct according to nameplate specifications.

2. Insulate all ducts, particularly if unit is located outside of the conditioned space.

3. It is recommended that the outline drawing be studied and dimensions properly noted and checked against selected installation site. By noting in advance which knock-outs are to be used, proper clearance allowances can be made for installation and possible future service.

Refer to the convertibility Summary chart on Page 5 to maximize efficiency.

4. If supplementary heat is to be added, power supply must be sufficient to carry the load.

NOTE: If air handler is used WITHOUT a supplementary electric heater, a plate is required to cover the open hole in the airflow system. See Figure 5. Also, seal the cabinet where the wire enters.

5. If the unit is installed without a return air duct, applicable local codes may limit this air handler to installation only in a single story residence.

6. If the outdoor unit is to be installed later, or by others, then installation of the air handler must be made to allow access for refrigerant lines, or attach refrigerant lines to air handler when installing. Make sure there are provisions for installing condensate drain lines.
