Transformation And Sustainability In Agriculture Connecting Practice With Social Theory:

Transformation and Sustainability in Agriculture Sietze Vellema, 2011-09-06 Public pressure and societal changes induce interventions and policies which aim to transform agriculture and food provision This book shows that for upscaling novel practices and organizational models it is important to include meso level regime aspects in analysis and practice The argument presented is that our understanding of the human and social dimensions of transformation processes can be enriched by anchoring practice and policy in social theory A focus on transitions offers a clear view on the direction and velocity of change This publication aims to complement this by highlighting theoretical insights in the social or institutional mechanisms enabling or hindering change Essays on a selection of theorists varying from idealist or materialist accounts to actor or system approaches examine what the presented explanatory framework on social change offers in terms of guidance for intervention and action The value of these theoretical insights is further explored in a selection of case studies in agriculture and food rural reconstruction in horticulture and livestock seed supply systems and pest control Each case study systematically applies six theoretical frameworks with the purpose of investigating what novel insights arise from looking at the change process from a particular perspective Through this exercise the often implicit assumptions of hands on change processes surface This book is of interest to practitioners engaged in changing current practices in agriculture and food provision policy makers interested in grasping why transitions are challenging applied researchers who like to move beyond individual case studies and social and natural scientists involved in integrative studies of complex change processes

Transition Pathways towards Sustainability in Agriculture Lee-Ann Sutherland, Ika Darnhofer, Geoff Wilson, Lukas Zagata, 2014-11-24 Based on the research of an interdisciplinary team of sociologists geographers and economists this book focuses on understanding farming transitions in Europe The book discusses the importance of understanding transition pathways towards sustainability using case studies from Bulgaria the Czech Republic France Germany Greece Portugal and the United Kingdom Assessing the utility of the multi level perspective in transition theory for addressing contemporary issues the book identifies future research needs and possible approaches making this an essential read for researchers interested in issues of rural and agricultural change

Evolutionary Governance Theory Raoul Beunen, Kristof Van Assche, Martijn Duineveld, 2014-12-02 This volume presents empirical studies and theoretical reflections on Evolutionary Governance Theory EGT its most important concepts and their interrelations As a novel theory of governance EGT understands governance as radically evolutionary which implies that all elements of governance are subject to evolution that these elements co evolve and that many of them are the product of governance itself Through this book we learn how communities understand themselves and their environment and why they create the complex structures and processes we analyze as governance paths Authors from different disciplines develop the EGT framework further and apply it to a wide range networks of power governance of agricultural resources etc The contributors also reflect on the possibilities and

limitations of steering intervention management and development in a world continuously in flux It bridges the gap between more fundamental and philosophical accounts of the social sciences and applied studies offering theoretical advancements as well as practical recommendations **The Routledge Handbook of Planning Theory** Michael Gunder, Ali

Madanipour, Vanessa Watson, 2017-08-23 The Routledge Handbook of Planning Theory presents key contemporary themes in planning theory through the views of some of the most innovative thinkers in planning They introduce and explore their own specialized areas of planning theory to conceptualize their contemporary positions and to speculate how these positions are likely to evolve and change as new challenges emerge In a changing and often unpredictable globalized world planning theory is core to understanding how planning and its practices both function and evolve As illustrated in this book planning and its many roles have changed profoundly over the recent decades so have the theories both critical and explanatory about its practices values and knowledges In the context of these changes and to contribute to the development of planning research this handbook identifies and introduces the cutting edge and the new emerging trajectories of contemporary planning theory The aim is to provide the reader with key insights into not just contemporary planning thought but potential future directions of both planning theory and planning as a whole This book is written for an international readership and includes planning theories that address or have emerged from both the global North and parts of the world beyond **Open**

Climate change and sustainable development Thomas Potthast, Simon Meisch, 2012-08-13 Climate change is a major framing condition for sustainable development of agriculture and food Global food production is a major contributor to global greenhouse gas emissions and at the same time it is among the sectors worst affected by climate change This book brings together a multidisciplinary group of authors exploring the ethical dimensions of climate change and food Conceptual clarifications provide a necessary basis for putting sustainable development into practice Adaptation and mitigation demand altering both agricultural and consumption practices Intensive vs extensive production is reassessed with regard to animal welfare efficiency and environmental implications Property rights play an ever increasing role as do shifting land use practices agro energy biotechnology food policy to green consumerism And last but not least tools are suggested for teaching agricultural and food ethics Notwithstanding the plurality of ethical analyses and their outcome it becomes apparent that governance of agri food is faced by new needs and new approaches of bringing in the value dimension much more explicitly This book is intended to serve as a stimulating collection that will contribute to debate and reflection on the sustainable future of agriculture and food production in the face of global change

The ethics of consumption Helena Röcklinsberg, Per Sandin, 2013-11-05 We are all consumers What we consume how and how much has consequences of great moral importance for humans animals and the environment Great challenges lie ahead as we are facing population growth and climate change and reduced availability of fossil fuels It is often argued that key to meeting those challenges is changing consumption patterns among individual as well as institutions for instance through reducing meat consumption switching to organic or fair trade products boycotting or buycotting certain products or consuming less overall There is considerable disagreement regarding how to bring this about whose responsibility it is and even whether it is desirable Is it a question of political initiatives producer responsibility the

virtues and vices of individual consumers in the developed world or something else Many of these issues pose profound intellectual challenges at the intersection of ethics political philosophy economics and several other fields This publication brings together contributions from scholars in numerous disciplines including philosophy law economics sociology and animal welfare who explore the theme of the ethics of consumption from different angles

Agricultural Adaptation to Climate Change Christopher R. Bryant, Mamadou A. Sarr, Kénel Délusca, 2016-08-26 This book deals with one of the major challenges facing human society and its governments climate change and variability The principal objective of the book is to explore how agricultural production through the actions primarily of farmers including peasant farmers adapt to these changing circumstances what the limitations of adaptation are how the process of adaptation varies between different territories e g developed countries versus developing countries and what are or can be the most effective roles for actors other than the farmers including different levels of government and non governmental organizations NGOs such as professional associations of farmers and community organizations The principal argument is threefold 1 while there are significant differences between territories and countries in terms of the capacity of farmers and the other actors to engage in capacity building to be able to adapt effectively to climate change and variability 2 the critical roles are those played out by the farmers themselves but that 3 other actors can play an important role in accompanying farmers in their adaptation process providing relevant and strategic information counseling them and facilitating networking and meetings when appropriate This effectively means that without engaging in the local adaptation processes governments can really only play effective roles by working with other actors at the local and regional levels When it occurs it can be very effective but when it does not farmers are left to their own devices and even then many are able to use their own creativity and local knowledge to survive and continue to develop Essentially therefore the secondary argument that is followed throughout the book is that adaptation is essentially a social process that requires an understanding of social processes and dynamics in each farming community and territory It involves an understanding for instance of information diffusion processes in the different farming communities and territories which provides a set of tools to promote and facilitate the adoption process in the context of adaptation to climate change and variability
