**The Spatial Humanities** David J. Bodenhamer, John Corrigan, Trevor M. Harris, 2010-06-28 Geographic information systems GIS have spurred a renewed interest in the influence of geographical space on human behavior and cultural development Ideally GIS enables humanities scholars to discover relationships of memory artifact and experience that exist in a particular place and across time Although successfully used by other disciplines efforts by humanists to apply GIS and the spatial analytic method in their studies have been limited and halting The Spatial Humanities aims to re orient and perhaps revolutionize humanities scholarship by critically engaging the technology and specifically directing it to the subject matter of the humanities To this end the contributors explore the potential of spatial methods such as text based geographical analysis multimedia GIS animated maps deep contingency deep mapping and the geo spatial semantic web

[GIScience & Remote Sensing](#), 2007 **Advanced Geographic Information Systems**, 2009 *Introduction to Web Mapping* Michael Dorman, 2020-01-28 A web map is an interactive display of geographic information in the form of a web page that you can use to tell stories and answer questions Web maps have numerous advantages over traditional mapping techniques such as the ability to display up to date or even real time information easy distribution to end users and highly customized interactive content Introduction to Web Mapping teaches you how to develop online interactive web maps and web mapping applications using standard web technologies HTML CSS and JavaScript The core technologies are introduced in Chapters 1 5 focusing on the specific aspects which are most relevant to web mapping Chapters 6 13 then implement the material and demonstrate key concepts for building and publishing interactive web maps The book Gives an introduction to fundamental web technologies HTML CSS and JavaScript Covers Leaflet the popular open source JavaScript library for building web maps Describes the GeoJSON vector layer format and the Ajax technique for loading data Shows how spatial database APIs such as the CARTO platform can be combined with a web map to query and display large amounts of data

Introduces client side geoprocessing with the Turf.js JavaScript library for applying spatial operators in the browser  
Demonstrates a complex web mapping application for collecting crowdsourced data combining Leaflet, CARTO and the Leaflet draw plugin  
Goes over 69 complete code examples and includes 9 solved exercises for building web maps and web pages  
Downloadable code is provided in the online supplement  
The book is intended for beginners with no background in web technologies or programming  
Nevertheless some prior experience with computers and programming is beneficial  
The book can be used for self study or as a textbook in a standard undergraduate Web mapping course in a Geography department intended for students specializing in Geographic Information Systems GIS
