Model-Based Testing for Embedded Systems Justyna Zander, Ina Schieferdecker, Pieter J. Mosterman, 2017-12-19
What the experts have to say about Model Based Testing for Embedded Systems This book is exactly what is needed at the exact right time in this fast growing area From its beginnings over 10 years ago of deriving tests from UML statecharts model based testing has matured into a topic with both breadth and depth Testing embedded systems is a natural application of MBT and this book hits the nail exactly on the head Numerous topics are presented clearly thoroughly and concisely in this cutting edge book The authors are world class leading experts in this area and teach us well used and validated techniques along with new ideas for solving hard problems It is rare that a book can take recent research advances and present them in a form ready for practical use but this book accomplishes that and more I am anxious to recommend this in my consulting and to teach a new class to my students Dr Jeff Offutt professor of software engineering George Mason University Fairfax Virginia USA This handbook is the best resource I am aware of on the automated testing of embedded systems It is thorough comprehensive and authoritative It covers all important technical and scientific aspects but also provides highly interesting insights into the state of practice of model based testing for embedded systems Dr Lionel C Briand IEEE Fellow Simula Research Laboratory Lysaker Norway and professor at the University of Oslo Norway As model based testing is entering the mainstream such a comprehensive and intelligible book is a must read for anyone looking for more information about improved testing methods for embedded systems Illustrated with numerous aspects of these techniques from many contributors it gives a clear picture of what the state of the art is today Dr Bruno Legeard CTO of Smartesting professor of Software Engineering at the University of Franche Comte Besan on France and co author of Practical Model Based Testing

Improving the Software Testing Skills of Novices During Onboarding Through Social Transparency Raphael Pham, 2016-12-15 Inexperienced software developers such as fresh graduates shape the future of software engineering as a practice Supporting these novice developers in becoming high quality engineers is a key objective of our engineering community Yet inexperienced developers have considerable trouble in applying the fundamentals of systematic software testing in industrial settings Gaps in testing skills arise from inherent attributes of systematic testing itself and environmental attributes such as the educational setting in universities Frustrated practitioners have long since devised cost intensive workarounds In this thesis this problem situation is qualitatively analyzed in great detail leveraging insights from three Grounded Theory studies Employing Everett M Rogers Theory of the Diffusion of Innovation strategic improvements to the onboarding situation are presented Lastly tool support for the strategies developed in this thesis is presented and evaluated
