Transboundary Freshwater Dispute Resolution Heather L. Beach, 2000 This book provides a comprehensive review of the relevant literature on managing conflicts stemming from the quantity and quality problems of water around the world. So far few comprehensive and interdisciplinary analyses of such international surface water conflicts have been produced. The literature surveyed indicates that while in many areas there has been extensive research and analysis, there continues to be a need for more studies on the specific situations that lead to conflicts over water and other environment resources. Lateral learning, an attempt to understand the similarities between all conflicts over natural resources, will lend itself to future applications in predicting and preventing these conflicts. A survey of international watersheds provides some bibliographical and general data collected from over 200 transboundary watersheds. A subset of case studies of the exhaustive list of international watersheds is examined in greater detail. A related effort is a compilation and analysis of relevant water treaties and the rationale for their implementations.

**A 'Stepped Approach' to Disputes on International Watercourses** Riley T. Denoon, 2025-07-10 With increasing global pressure on scarce international water resources, the importance of dispute avoidance and resolution at the international level cannot be understated. A Stepped Approach to Disputes on International Watercourses explores a conceptual and practical framework for addressing these complex challenges, presenting a structured multi-faceted approach that integrates technical expertise, diplomatic negotiations, and when necessary, binding adjudication. Drawing on a broad analysis of 225 international watercourse agreements, it puts forward a stepped approach as an important tool that can foster cooperation, prevent conflicts, and ensure the equitable and sustainable use of our shared water resources.

**The Encyclopedia of Public Choice** Charles Rowley, Friedrich Schneider, 2008-01-25 The Encyclopedia provides a detailed and comprehensive account of the subject known as public choice. However, the title would not convey sufficiently the breadth of the Encyclopedia's contents, which can be summarized better as the fruitful interchange of economics, political science, and moral philosophy on the basis of an image of man as a purposive and responsible actor who pursues his own objectives as efficiently as possible. This fruitful interchange between the fields outlined above existed during the late eighteenth century during the brief period of the Scottish Enlightenment, when such great scholars as David Hume, Adam Ferguson, and Adam Smith contributed to all these fields and more. However, as intellectual specialization gradually replaced broad-based scholarship from the nineteenth century onwards, it became increasingly rare to find a scholar making major contributions to more than one. Once Alfred Marshall defined economics in neoclassical terms as a narrow positive discipline, the link between economics, political science, and moral philosophy was all but severed, and economists redefined their role into that of the humble dentist providing technical economic information as inputs to improve the performance of impartial, benevolent, and omniscient governments in their attempts to promote the public interest. This indeed was the dominant view within an

economics profession that had become besotted by the economics of John Maynard Keynes and Paul Samuelson immediately following the end of the Second World War      **Handbook of Water Economics** Ariel Dinar,Kurt Schwabe,2015-09-25

Water scarcity whether in the quality or quantity dimension afflicts most countries Decisions on water management and allocation over time space and among uses and users involve economic considerations This Handbook assembles research that represents recent thinking and applications in water economics The book chapters are written by leading scholars in the field who address issues related to its use management and value The topics cover analytical methods sectoral and intersectoral water issues and issues associated with different sources of water      **A History of Water, Series III, Volume 2: Sovereignty and International Water Law** Terje Tvedt,Tadesse Kasse Woldetsadik,Owen McIntyre,2015-05-30 As global climate change threatens to change radically both the political and physical climate with regard to water issues so a reassessment of some of the fundamental principles of international water law is emerging One of the most important principles being reassessed is the sovereign equality of states This volume brings together more than thirty leading international water and legal specialists to explore the development and changing relationship between water state sovereignty and international law Offering fresh insights into one of the most pressing issues in global water policy Sovereignty and International Water Law will form an essential reference for water professionals legal specialists and policy makers alike      **From Identity-Based Conflict to Identity-Based Cooperation** Jay Rothman,2012-11-28 Through proper engagement identity based conflict enhances and develops identity as a vehicle to promote creative collaboration between individuals the groups they constitute and the systems they forge This handbook describes the specific model that has been developed as well as various approaches and applications to identity conflict used throughout the world      **Sustainable Development Insights from India** Purnamita Dasgupta,Anindita Roy Saha,Robin Singhal,2021-03-19 This volume is a collection of essays that provide a comprehensive coverage of multiple aspects of the discourse on environment development and sustainability It is designed to bring in a host of perspectives highlighting the synergies and the trade offs in this debate showcasing research along with policy implications of putting research into use The global discussion on sustainability paints the broad canvas for this book This volume aims to probe some contemporary issues that will help in understanding the sustainability narrative in India The topics span over a host of questions on energy environment natural resources and related constituents of development The discourse further extends to the role of economic modelling public policy debates political intervention stakeholders response community participation and so on The discussions are often based on empirical support review of existing literature as well as policy analysis With an ultimate aim to understand the overall development narrative of the people of India the discourse takes in its ambit the nuances of resource utilisation economic growth COVID 19 impacts competitiveness and market structures urbanization sectoral reforms environmental hazards climate change pollution natural resource accounting and management to name a few The book is divided into four sections namely The Big

Picture Evolving Perspectives The Energy Scenario Dilemmas and Opportunities Sustainability Cross Cuts Developmental Aspects and Externality Empirics Knowledge and Practice The first section contains commentaries on the overarching themes of economic growth development and sustainability It presents some emerging perspectives on the developmental crisis that has emerged through the environmental lens with additional focus on the need for inclusion of creativity knowhow technology and financial resources to achieve the ambitious SDG targets The second section brings out the dilemmas and opportunities in the energy sector that has been a key player in discussions of sustainability especially for India where significant technological advances in conventional forms of energy supply coexists with fairly low levels of per capita energy consumption and energy security is a key challenge The section on sustainability crosscuts attempts to highlight the problems and processes of mainstreaming the sustainability question into conventional thinking through the concepts of a circular economy green accounting techniques institutional and governance structures public policy and inclusive growth amongst others The last section presents some empirical studies on environmental externalities the unaccounted environmental effects of economic production and consumption and finally the behavioural aspects of the stakeholders that are crucial in the larger narrative of sustainable development This edited volume contains contributions of reputed scholars from various Indian universities research institutions and professionals from outside academia who are proven experts in their fields The link between policy practice and well being of the large vulnerable population of India is the major focus of enquiry that will help researchers practitioners and policy planners in conducting further research in energy environment resource and linked areas of development economics General readers with an active interest in energy environment and economic development are also likely to find this book an interesting read especially in the times of several environmental challenges facing humankind

**Conflict Prevention and Resolution in Water Systems** Aaron T. Wolf, 2002 This important collection reprints the most significant papers and case studies on the prevention and resolution of conflict over water resources It focuses in particular on the human dynamics that are involved when conflicts over water resources impact on different interest groups economic sectors and legal or political boundaries It addresses key issues which arise at both the local and the international level including amongst others How do people interact in these situations of conflict What methods do they use to find a compromise What institutions do they create either jointly or unilaterally to help overcome problems in the future This interdisciplinary collection will be essential reading for professional water practitioners throughout the world including engineers economists geographers geologists and political scientists concerned with water disputes and conflict resolution It will make a significant contribution to the study of water as an essential theme in the increasingly important topic of environmental security

Subramanian,Balakrishna Pisupati,2010 Traditional knowledge TK has contributed immensely to shaping development and human well being Its influence spans a variety of sectors including agriculture health education and governance However in today s world TK and its practitioners are increasingly underrepresented or under utilized Further while the applicability of TK to human and environmental welfare is well recognized collated information on how TK contributes to different sectors is not easily accessible      **Social Sciences Research Journal** ,2016      **Hastings International and Comparative Law Review** ,2004      *The River Nile in the Post-colonial Age* Terje Tvedt,2010 The Nile Basin is a vast and varied area of 350 million people Parts of the basin have become the very symbols of African misery suffering drought genocide state failure and aid dependency At its heart lies the Nile itself Yet while the importance of the river is well documented for the colonial period there is no comprehensive account of its management after independence The River Nile in the Post Colonial Age details the modern development of the Nile Basin and of the efforts to manage its waters With important new material by researchers from each of the countries through which the Nile passes it provides an indispensable aid to understanding the complex history of the basin the politics surrounding it and the efforts being made to jointly manage it      Sustainable Development of the Ganges-Brahmaputra-Meghna Basins Asit K. Biswas,Juha I. Uitto,2001 The Ganges Brahmaputra Meghna basin contains the largest number of the world s poor in any one region The population is increasing steadily and unless the current development trends are broken poverty will become even more pervasive The region is endowed with considerable natural resources that could be used to foster sustainable economic development Water could be successfully used as the engine to promote economic development of the region which has been hindered because the most populous part of the basin is shared by three countries Bangladesh India and Nepal who have in the past been unable to agree to an integrated development plan In Sustainable Development of the Ganges Brahmaputra Meghna Basins leading technocrats and intellectuals discuss how through cooperation between the countries concerned and by taking a holistic development approach the quality of life of the people of the basin could be improved significantly within a reasonable timeframe
