Traffic Grooming In Optical Wdm Mesh Networks Optical Networks:

Traffic Grooming in Optical WDM Mesh Networks Zhu Keyao, Hongyue Zhu, Biswanath Mukherjee, 2005-08-16 Optical networks based on wavelength division multiplexing WDM technology offer the promise to satisfy the bandwidth requirements of the Internet infrastructure and provide a scalable solution to support the bandwidth needs of future applications in the local and wide areas. In a wavelength routed network an optical channel referred to as a lightpath is set up between two network nodes for communication. Using WDM technology an optical fiber link can support multiple non overlapping wavelength channels each of which can be operated at the data rate of 10 Gbps or 40 Gbps today. On the other hand only a fraction of customers are expected to have a need for such a high bandwidth. Due to the large cost of the optical backbone infrastructure and enormous WDM channel capacity connection requests with diverse low speed bandwidth requirements need to be efficiently groomed onto high capacity wavelength channels. This book investigates the optimized design provisioning and performance analysis of traffic groomable WDM networks and proposes and evaluates new WDM network architectures. Organization of the Book Significant amount of research effort has been devoted to traffic grooming in SONET WDM ring networks since the current telecom networks are mainly deployed in the form of ring topologies or interconnected rings. As the long haul backbone networks are evolving to irregular mesh topologies traffic grooming in optical WDM mesh networks becomes an extremely important and practical research topic for both industry and academia.

Traffic Grooming for Optical Networks Rudra Dutta, Ahmed E. Kamal, George N. Rouskas, 2008-08-06 The objective of this book is to provide timely and comprehensive coverage of the principles, technology, practice and future of traffic grooming in optical networks. Traffic grooming considerations are already shaping new switch designs and standards including next generation Synchronous Optical Network Synchronous Digital Hierarchy SONET SDH and Generic Framing Procedure GFP are affecting future optical network technologies and are creating new business opportunities. Yet information on the topic is scattered and there is a shortage of technical sources where relevant material can be accessed in a single location. The motivation for this book was to bridge this gap by providing a single authoritative point of reference to the traffic grooming state of the art. Traffic grooming is a complex subject involving a number of interrelated concepts, standards and technologies. It is also a rapidly growing field of study making it difficult for a single book to cover all aspects in detail. To cope with this scope and complexity this book provides appropriate background information followed by an in depth study of a few key issues and challenges. It has been our intention to bring together a broad range of perspectives from preeminent researchers in both academia and industry. We believe that these multiple diverse points of view add considerable value and make the contents more interesting to the reader.
