Tales of Impossibility David S. Richeson, 2021-11-02 A comprehensive look at four of the most famous problems in mathematics *Tales of Impossibility* recounts the intriguing story of the renowned problems of antiquity four of the most famous and studied questions in the history of mathematics First posed by the ancient Greeks these compass and straightedge problems squaring the circle trisecting an angle doubling the cube and inscribing regular polygons in a circle have served as ever present muses for mathematicians for more than two millennia David Richeson follows the trail of these problems to show that ultimately their proofs which demonstrated the impossibility of solving them using only a compass and straightedge depended on and resulted in the growth of mathematics Richeson investigates how celebrated luminaries including Euclid Archimedes Viète Descartes Newton and Gauss labored to understand these problems and how many major mathematical discoveries were related to their explorations Although the

problems were based in geometry their resolutions were not and had to wait until the nineteenth century when mathematicians had developed the theory of real and complex numbers analytic geometry algebra and calculus Pierre Wantzel a little known mathematician and Ferdinand von Lindemann through his work on pi finally determined the problems were impossible to solve Along the way Richeson provides entertaining anecdotes connected to the problems such as how the Indiana state legislature passed a bill setting an incorrect value for pi and how Leonardo da Vinci made elegant contributions in his own study of these problems Taking readers from the classical period to the present *Tales of Impossibility* chronicles how four unsolvable problems have captivated mathematical thinking for centuries Shaping Space Marjorie

Senechal,2013-03-22 This second edition is based off of the very popular *Shaping Space A Polyhedral Approach* first published twenty years ago The book is expanded and updated to include new developments including the revolutions in visualization and model making that the computer has wrought *Shaping Space* is an exuberant richly illustrated interdisciplinary guide to three dimensional forms focusing on the suprisingly diverse world of polyhedra Geometry comes alive in *Shaping Space* as a remarkable range of geometric ideas is explored and its centrality in our culture is persuasively demonstrated The book is addressed to designers artists architects engineers chemists computer scientists mathematicians bioscientists crystallographers earth scientists and teachers at all levels in short to all scholars and educators interested in and working with two and three dimensional structures and patterns *Books in Print Supplement* ,1988 **Solution**

Focused Practice in Asia Debbie Hogan,Dave Hogan,Jane Tuomola,Alan Yeo,2016-12-08 This book is a collection of solution focused practice across Asia offering case examples from the fields of therapy supervision education coaching and organisation consulting It demonstrates the usefulness of the solution focused approach in the Asian context by providing practice based evidence and highlights the diversity of application By sharing real case examples in action across Asia it is the aim of this book to stimulate the curious and inspire the converted It gives readers a taste of what it is like to use this approach within an Asian context in different areas of practice and within a broad spectrum of clinical issues The examples offer exciting and creative ways in which solution focused practice can be used within the Asian context with the hope that more practitioners will be curious enough to give solution focused practice serious consideration as a viable evidence based practice **Books in Print** ,1981
