Ultrasonic Inspection Technology Development and Search Unit Design Mark V. Brook, 2012-03-13 Ultrasonic testing is a relatively new branch of science and industry The development of ultrasonic testing started in the late 1920s At the beginning the fundamentals of this method were borrowed from basic physics geometrical and wave optics acoustics and seismology Later it became clear that some of these theories and calculation methods could not always explain the phenomena observed in many specific cases of ultrasonic testing Without knowing the nuances of the ultrasonic wave propagation in the test object it is impossible to design effective inspection technique and search units for it realization This book clarifies the theoretical differences of ultrasonics from the other wave propagation theories presenting both basics of physics in the wave propagation elementary mathematic and advanced practical applications Almost every specific technique presented in this book is proofed by actual experimental data and examples of calculations *Fundamentals of Ultrasonic Testing* Chunguang Xu, Weibin Li, 2024-08-01 Focusing on the theory and state of the art technologies of ultrasonic testing UT this book examines ultrasonic propagation in solids and its detection applications and explores the intersection of UT technology with various fields of electromagnetics optics and physics UT is one of the most widely used nondestructive testing techniques due to its high performance in terms of detection efficiency and safety The rapid development of modern industrial products and technologies has created a new challenge and demand for ultrasonic nondestructive testing technology This book introduces the fundamentals of UT including sound wave and sound field interface wave theory and liquid solid coupled sound field It then discusses various types of UT methods ranging from the critically refracted longitudinal wave method to ultrasonic surface wave and ultrasonic guided wave detection methods Some newly developed UT techniques are also discussed including phased array UT high frequency UT and non contact UT This title will appeal to engineering students and technicians in the field of ultrasonic nondestructive testing **Production at the leading edge of technology** Bernd-Arno Behrens, Alexander Brosius, Wolfgang Hintze, Steffen Ihlenfeldt, Jens Peter Wulfsberg, 2020-09-24 This congress proceedings provides recent research on leading edge manufacturing processes The aim of this scientific congress is to work out diverse individual solutions of production in the border area and transferable methodological approaches In addition guest speakers with different backgrounds will give the congress participants food for thoughts interpretations views and suggestions The manufacturing industry is currently undergoing a profound structural change which on the one hand produces innovative solutions through the use of high performance communication and information technology and on the other hand is driven by new requirements for goods especially in the mobility and energy sector With the social discourse on how we should live and act primarily according to guidelines of sustainability structural change is gaining increasing dynamic It is essential to translate politically specified sustainability goals into socially accepted and marketable technical solutions Production research is meeting this challenge and will make important contributions and
