Arduino by Example Adith Jagadish Boloor, 2015-09-14 Design and build fantastic projects and devices using the Arduino platform About This Book Explore the different sensors that can be used to improve the functionality of the Arduino projects Program networking modules in conjunction with Arduino to make smarter and more communicable devices A practical guide that shows you how to utilize Arduino to create practical useful projects Who This Book Is For This book is an ideal choice for hobbyists or professionals who want to create quick and easy projects with Arduino As a prerequisite readers must have a working Arduino system and some programming background ideally in C C Basic knowledge of Arduino is helpful but not required to follow along with this book What You Will Learn Understand and utilize the capabilities of the Arduino Integrate sensors to gather environmental data and display this information in meaningful ways Add modules such as Bluetooth and Wi Fi that allow the Arduino to communicate and send data between devices Create simple servers to allow communication to occur Build automated projects including robots while learning complex algorithms to mimic biological locomotion Implement error handling to make programs easier to debug and look more professional Integrate powerful programming tools and software such as Python and Processing to broaden the scope of what the Arduino can achieve Practice and learn basic programming etiquette In Detail Arduino an opensource physical computing platform based on a simple microcontroller board and a development environment for writing software for the board The opensource Arduino software IDE makes it easy to write code and upload it to the board It runs on Windows Mac OS X and Linux The environment is written in Java and based on Processing and other opensource software With the growing interest in home made weekend projects among students and hobbyists alike Arduino offers an innovative and feasible platform to create projects that promote creativity and technological tinkering Arduino by Example is a project oriented guide to help you fully utilize the power of one of the world s most powerful open source platforms Arduino This book demonstrates three projects ranging from a home automation project involving your lighting system to a simple robotic project to a touch sensor project You will first learn the basic concepts such as how to get started with the Arduino and as you start building the project you will develop the practical skills needed to successfully build Arduino powered projects that have real life implications The complexity of the book slowly increases as you complete a project and move on to the next By the end of this book you will be able to create basic projects and utilize the elements used in the examples to construct your own devices Style and approach This book follows a project oriented approach with multiple images and plenty of code to help you build your projects easily The book uses a tutorial based methodology where the concepts are first explained and then implemented to help you develop the projects

Arduino: Building LED and Espionage Projects Adith Jagdish Boloor, Samarth Shah, Utsav Shah, Marco Schwartz, 2016-09-30 Find out how to transform your Arduino device into an awesome secret agent gadget with this course taking in everything from robotics to remote control cameras About This Book This course won t just teach you It

will help you apply your knowledge so you can get creative quickly Find out how to make a computer interact with the real world you ll be learning the basics of IoT without realizing it Robots A sound controlled Christmas tree This course proves anything is possible with an Arduino Who This Book Is For Seeking inspiration This course will help you get creative with your Arduino quickly What You Will Learn Find out how to explore the full potential of your tiny Arduino Find out how to bridge the gap between the real world and software as you gather and visualize data from the environment Create simple servers to allow communication to occur Transform your Arduino into a GPS tracker Use the Arduino to monitor top secret data Build a complete spy robot In Detail An Arduino might be a tiny computer but it can be used as the foundation for a huge range of projects In this course we ll show you how just some of the projects that are possible with an Arduino From robotics to secret agent gadgets we re pretty confident that this course will get you thinking creatively and inspire you to create your very own new projects using the Arduino hacking skills you learn This course combines both text and video content it s made up of three modules to help organize your learning In the first module we ll show you how to build three different Arduino projects All of these will not only get you up and running with something practical they ll also help you better understand how the Arduino works Find out how to develop a home automation system and even build a robot In the second module we ll go one step further to help you get creative as you learn how to program LEDs with your Arduino You ll find out how to build a mood lamp and a remote controlled TV backlight before going on to make a sound controlled LED Christmas tree that makes use of sound visualization Finally the third module takes you from stylish design into espionage as you learn how to create neat secret agent gadgets with your Arduino Find out how to build an alarm system a fingerprint sensor even open a lock with a text message And that s not all but to find out more you ll have to dive in This Learning Path combines some of the best that Packt has to offer in one complete curated package It includes content from the following Packt products Arduino By Example by Adith Jagadish Bloor Arduino BLINK Blueprints by Samarth Shah Utsav Shah Arduino for Secret Agents by Marco Shwartz Style and approach Combining both video and text and built from some of Packt s very best Arduino content this course comprises of three modules covering a range of projects It s completely focused on helping the user get creative as quickly as possible so they can explore what s possible with Arduino themselves

The Frankencamera Eino-Ville Aleksi Talvala, 2011 Digital cameras both in traditional form factors and as parts of cell phones have become ubiquitous over the last decade But for the most part they remain black boxes to the end user and cannot be reprogrammed or modified This has become an obstacle to researchers in the new field of computational photography who want to use the growing computing power of digital cameras to create images no traditional camera could produce This dissertation presents the Frankencamera platform a digital camera system designed for computational photography The Frankencamera is a fully open fully programmable digital camera which can be easily modified to test out new research ideas The Frankencamera architecture allows for per frame control of the capture process and accurate synchronization of all the

components that make up the camera Based on this architecture this dissertation details two hardware platforms the F2 a flexible custom built camera and the Nokia N900 a commercial smartphone Both platforms can be easily programmed at a high level using the FCam API written to embody the Frankencamera architecture Finally this dissertation presents several sample applications for the Frankencamera platform Several of these applications could not have been developed for any existing camera platform and the ease and speed at which they were written show that the Frankencamera platform is a compelling tool for computational photography
