Utilization Of Plant Materials For Control Of Soybean Cyst Nematode:

Utilization of Plant Materials for Control of Soybean Cyst Nematode Hassan M. Auwal, Jing-wu Zheng, 2015-09-24 Plant parasitic nematodes PPN are major constraints to food production worldwide PPN cause annual crop yield losses of 12.3 % to global food production This is estimated at monetary value of 157 billion U S dollars worldwide At present the most widely used method for control of PPN is the use of synthetic chemical nematicides Nematicides although highly effective more convenient in use and drastic in their action against nematodes they are now being re appraised globally due to their undesirable effect on the environment man and biodiversity The necessity of creating a healthy ecosystem and environment that are necessary to the survival of humans and other biodiversity on earth cannot be overemphasized Plant material resources offer great potentials as environment friendly alternatives to synthetic chemicals This book is about achieving a mission of reducing negative human impacts on the ecosystem and achieving environmental resource management and protection through the use of plant materials Information contained in the book on green chemistry and conservation biology will go a long way towards achieving environmental sustainability

Plant Parasitic Nematodes in Sustainable Agriculture of North America Sergei A. Subbotin, John J. Chitambar, 2018-12-17 Plant parasitic nematodes are recognized as one of the greatest threats to crop production throughout the world Estimated annual crop losses of 8 billion in the United States and 78 billion worldwide are attributed to plant parasitic nematodes Plant parasitic nematodes not only cause damage individually but form disease complexes with other microorganisms thereby increasing crop loss Nematode diseases of crops are difficult to control because of their insidious nature and lack of specific diagnostic symptoms which closely resemble those caused by other plant pathogens and abiotic diseases Future developments of sustainable management systems for preventing major economical agricultural losses due to nematodes is focused on strategies that limit production costs enhance crop yields and protect the environment This book presents a first compendium and overview for nematode problems and their management across North America Each chapter provides essential information on the occurrence and distribution of plant parasitic nematodes their major crop hosts impact on crop production and sustainable management strategies for each region of the continent including Canada Mexico and all states of the USA For each region a thematic overview of changes in crop production affected by plant parasitic nematodes and their management strategies over time will provide invaluable information on the important role of plant parasitic nematodes in sustainable agriculture
