**Wallace, Darwin, and the Origin of Species** James T. Costa, 2014-06-16 Darwin is credited with discovering evolution through natural selection but Alfred Russel Wallace saw the same process at work in nature and elaborated the same theory Dispelling misperceptions of Wallace as a secondary figure James Costa reveals the two naturalists as equals in advancing one of the greatest scientific discoveries of all time **Darwinism** Alfred Russel Wallace, 1889 **On the Origin of Species** Charles Darwin, 2003-03-28 Charles Darwin's *On the Origin of Species* in which he writes of his theories of evolution by natural selection is one of the most important works of scientific study ever published This unabridged edition also includes a rich selection of primary source material substantial selections from Darwin's other works Autobiography notebooks letters Voyage of the Beagle and The Descent of Man and selections from Darwin's sources and contemporaries excerpts from Genesis Paley Lamarck Spencer Lyell Malthus Huxley and Wallace **Darwinism** Alfred Russel Wallace, 2007-03 PREFACE THE Author of this very practical treatise on Scotch Loch Fishing desires clearly that it may be of use to all who had it He does not pretend to have written anything new but to have attempted to put what he has to say in as readable a form as possible Everything in the way of the history and habits of fish has been studiously avoided and technicalities have been used as sparingly as possible The writing of this book has afforded him pleasure in his leisure moments and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general This section is interleaved with blank sheets for the readers notes The Author need hardly say that any suggestions addressed to the case of the publishers will meet with consideration in a future edition We do not pretend to write or enlarge upon a new subject Much has been said and written and well said and written too on the art of fishing but loch fishing has been rather looked upon as a second rate performance and to dispel this idea is one of the objects for which this present treatise has been written Far be it from us to say anything against fishing lawfully practised in any form but many pent up in our large towns will bear us out when we say that on the whole a day's loch fishing is the most convenient One great matter is that the loch fisher is dependent on nothing but enough wind to curl the water and on a large loch it is very seldom that a dead calm prevails all day and can make his arrangements for a day weeks beforehand whereas the stream fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river it is quite another matter to arrange for a day's river fishing if one is looking forward to a holiday at a date some weeks ahead Providence may favour the expectant angler with a good day and the water in order but experience has taught most of us that the good days are in the minority and that as is the case with our rapid running streams such as many of our northern streams are the water is either too large or too small unless as previously remarked you live near at hand and can catch it at its best A common belief in regard to loch fishing is that the tyro and the experienced angler have nearly the same chance in fishing the one from the stern and the other from

the bow of the same boat Of all the absurd beliefs as to loch fishing this is one of the most absurd Try it Give the tyro either end of the boat he likes give him a cast of ally flies he may fancy or even a cast similar to those which a crack may be using and if he catches one for every three the other has he may consider himself very lucky Of course there are lochs where the fish are not abundant and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught and where each has a fair chance Again it is said that the boatman has as much to do with catching trout in a loch as the angler Well we dont deny that In an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream fishing

**On the Origin of Species** Charles Darwin, 2016-02-22 INTRODUCTION  
When on board H M S Beagle as naturalist I was much struck with certain facts in the distribution of the inhabitants of South America and in the geological relations of the present to the past inhabitants of that continent These facts seemed to me to throw some light on the origin of species that mystery of mysteries as it has been called by one of our greatest philosophers On my return home it occurred to me in 1837 that something might perhaps be made out on this question by patiently accumulating and reflecting on all sorts of facts which could possibly have any bearing on it After five years work I allowed myself to speculate on the subject and drew up some short notes these I enlarged in 1844 into a sketch of the conclusions which then seemed to me probable from that period to the present day I have steadily pursued the same object I hope that I may be excused for entering on these personal details as I give them to show that I have not been hasty in coming to a decision My work is now nearly finished but as it will take me two or three more years to complete it and as my health is far from strong I have been urged to publish this Abstract I have more especially been induced to do this as Mr Wallace who is now studying the natural history of the Malay archipelago has arrived at almost exactly the same general conclusions that I have on the origin of species Last year he sent to me a memoir on this subject with a request that I would forward it to Sir Charles Lyell who sent it to the Linnean Society and it is published in the third volume of the Journal of that Society Sir C Lyell and Dr Hooker who both knew of my work the latter having read my sketch of 1844 honoured me by thinking it advisable to publish with Mr Wallace s excellent memoir some brief extracts from my manuscripts I much regret that want of space prevents my having the satisfaction of acknowledging the generous assistance which I have received from very many naturalists some of them personally unknown to me I cannot however let this opportunity pass without expressing my deep obligations to Dr Hooker who for the last fifteen years has aided me in every possible way by his large stores of knowledge and his excellent judgment In considering the Origin of Species it is quite conceivable that a naturalist reflecting on the mutual affinities of organic beings on their embryological relations their geographical distribution geological succession and other such facts might come to the conclusion that each species had not been independently created but had descended like varieties from other species Nevertheless such a conclusion even if well founded would be unsatisfactory until it could be shown how the innumerable species inhabiting this world have been modified so as to acquire that perfection of structure

and coadaptation which most justly excites our admiration Naturalists continually refer to external conditions such as climate food etc as the only possible cause of variation In one very limited sense as we shall hereafter see this may be true but it is preposterous to attribute to mere external conditions the structure for instance of the woodpecker with its feet tail beak and tongue so admirably adapted to catch insects under the bark of trees In the case of the misseltoe which draws its nourishment from certain trees which has seeds that must be transported by certain birds and which has flowers with separate sexes absolutely requiring the agency of certain insects to bring pollen from one flower to the other it is equally preposterous to account for the structure of this parasite with its relations to several distinct organic beings by the effects of external conditions or of habit or of the volition of the plant itself The author of the Vestiges of Creation would I presume say that after a certain unknown number of generations some bird had given birth to a woodpecker and some plant to the misseltoe and that these had been produced perfect as we now see them but this assumption seems to me to be no explanation for it leaves the case of the coadaptations of organic beings to each other and to their physical conditions of life untouched and unexplained

**Charles Darwin's The Origin of Species** David Amigoni, Jeff Wallace, 2024-06-04 This volume marks a new approach to a seminal work of the modern scientific imagination Charles Darwin's *The Origin of Species* 1859 Darwin's central theory of natural selection neither originated nor could be contained within the parameters of the natural sciences but continues to shape and challenge our most basic assumptions about human social and political life Several new readings crossing the fields of history literature sociology anthropology and history of science demonstrate the complex position of the text within cultural debates past and present Contributors examine the reception and rhetoric of the *Origin* and its influence on systems of classification the nineteenth century women's movement literary culture criticism and practice and Hinduism in India At the same time a re-reading of Darwin and Malthus offers a constructive critique of our attempts to map the hybrid origins and influences of the text This volume will be the ideal companion to Darwin's work for all students of literature social and cultural history and history of science

*Darwinism* (1889) Alfred Russel Wallace, 2018-05-09 The present work treats the problem of the *Origin of Species* on the same general lines as were adopted by Darwin but from the standpoint reached after nearly thirty years of discussion with an abundance of new facts and the advocacy of many new or old theories While not attempting to deal even in outline with the vast subject of evolution in general an endeavour has been made to give such an account of the theory of Natural Selection as may enable any intelligent reader to obtain a clear conception of Darwin's work and to understand something of the power and range of his great principle Darwin wrote for a generation which had not accepted evolution and which poured contempt on those who upheld the derivation of species from species by any natural law of descent He did his work so well that descent with modification is now universally accepted as the order of nature in the organic world and the rising generation of naturalists can hardly realise the novelty of this idea or that their fathers considered it a scientific heresy to be condemned rather than seriously discussed
