

WHAT IS A ZOMBIE?

TYPES OF ZOMBIE

Once a human has turned into a zombie, they will enter a three stage process of transformation. All will go through these stages, but factors such as climate, body mass and the amount of infected material will have an impact.

To be clear, there are not stages of the 'Dead' - there will be variations later. For now, these humans have already transformed into the undead. They are fully infected with zombie virus and display symptoms of the zombie condition. In 2006, Dr. Michael described the

zombie-fighting community when he declared that 'all zombies are not equal'. He later went on to expand on a scientific theory of zombie evolution, which describes how the undead develop over the course of time after infection. For many years, scientists had offered accounts of desiccated zombies or huge blooded corpse monsters, but the fledgling science of 'Zombology' had no unified theory to explain these anomalies. Dr. Michael's stages of zombie evolution changed all of this and they are presented below.

WHAT IS A ZOMBIE? CLIMATIC CONDITIONS

Scientists have now proved that the climatic conditions which have the greatest influence on the 'type' of creature that zombies will form after 24hrs. The elements of climate in fact and form, impact on the stage of infection and they are now more detailed and ordered as follows:

- Hotter
- Colder
- Warmer
- Cooler

ZOMBIE EVOLUTION

STAGE 1 FRESH (NOSE, NECK, HUMORS)

These walking dead have completed the zombie virus in the last few days. They have a pale, greyish skin color and a bloodless complexion. Some will appear almost human in appearance, others will be showing major body parts irregularly. Their movements will be stiff and awkward. They will be unable to speak and they will have an unending interest in feeding on your flesh.

STAGE 2 PUTREFIED (NOSE, FINGERS, NAILS, BIG BOYS, SLAYERS)

In this stage, zombies generally start to show signs of decomposition. For example, you may see pale blue marks and green fungus patches appearing. However, the decomposition process is greatly accelerated by the zombie condition. In humid conditions, insects and/or gastric liquid may reach the corpse in an extremely fast

STAGE 3 DESICCATED (CLASICS, JES, STIFF, STENCHES, NIPERS)

Most of the walking dead will move into this 'classic' zombie phase of development. These creatures will be being frozen in appearance. Their skin will be dry and cracked, their muscles dry and cracked. By this stage, their clothes will be mostly torn and their eyes turned to hollow shells, even gelatinous in some cases. Climate conditions will determine the actual level of moisture in a zombie corpse, with dry conditions leading to a desiccated creature in which the skin hangs like a ruff, almost transparent. Over time, fungi or other body parts may just fall off with the creature becoming difficult to recognize.

ONCE INFECTED BY BITE OR FLUID EXCHANGE, A HUMAN WILL TRANSFORM INTO A ZOMBIE AND MUST THROUGH THESE ZOMBIE TYPES

TEMPERATURE High temperature high humidity

Most zombies of this kind will exhibit a certain response to the heat and fungi surrounding these walking corpses.

- High numbers of zombies
- High rate of decomposition
- More frequent growth

WETTER High temperature low humidity

Other infection in a 'desiccated' state. The dead will be in the end only with more decomposition than in other regions.

- Fastest zombies
- Wider bodies
- More frequent growth

TEMPERATE Low temperature high humidity

Systems about corpse in form of type of zombie in the end outside. Depending on the season, most will move towards the more plant.

- Most zombies will be in the desiccated stage within a month
- Lower bodies than the others

WETTER Low temperature low humidity

Other will often keep the dead fully from and may in the end with. In the end, you can expect change in a particularly cold and damp state.

- Zombies may be faster and more durable
- May be hard to decompose
