Zoobiquity The Astonishing Connection Between Human And Animal Health:

Zoobiquity Dr. Barbara N. Horowitz, Kathryn Bowers, 2013-04-09 Engaging science writing that bravely approaches a new frontier in medical science and offers a whole new way of looking at the deep kinship between animals and human beings. Zoobiquity is a species spanning approach to medicine bringing doctors and veterinarians together to improve the health of all species and their habitats. In the tradition of Temple Grandin, Oliver Sacks, and Neil Shubin, this is a remarkable narrative science book arguing that animal and human commonality can be used to diagnose, treat, and ultimately heal human patients. Through case studies of various species, human and animal kind alike, the authors reveal that a cross-species approach to medicine makes us not only better able to treat psychological and medical conditions but helps us understand our deep connection to other species with whom we share much more than just a planet. This revelatory book reaches across many disciplines: evolution, anthropology, sociology, biology, cutting-edge medicine, and zoology, providing fascinating insights into the connection between animals and humans and what animals can teach us about the human body and mind. *Zoobiquity* Barbara Natterson-Horowitz, Kathryn Bowers, 2013-04-09 A revelatory depiction of what animals can teach us about the human body and mind, exploring how animal and human commonality can be used to diagnose, treat, and heal patients of all species. Full of fascinating stories: Atul Gawande, M.D. Do animals overeat? Get breast cancer? Have fainting spells? Inspired by an eye-opening consultation at the Los Angeles Zoo which revealed that a monkey experienced the same symptoms of heart failure as human patients, cardiologist Barbara Natterson-Horowitz embarked upon a project that would reshape how she practiced medicine. Beginning with the above questions, she began informally researching every affliction that she encountered in humans to learn whether it happened with animals too. And usually it did: dinosaurs suffered from brain cancer, koalas can catch chlamydia, reindeer seek narcotic escape in hallucinogenic mushrooms, stallions self-mutilate, and gorillas experience clinical depression. Natterson-Horowitz and science writer Kathryn Bowers have dubbed this pan-species approach to medicine *zoobiquity*. Good Reasons for Bad Feelings Randolph M. Nesse, MD, 2019-02-12 A founder of the field of evolutionary medicine uses his decades of experience as a psychiatrist to provide a much needed new framework for making sense of mental illness Why do I feel bad There is real power in understanding our bad feelings With his classic *Why We Get Sick* Dr Randolph Nesse helped to establish the field of evolutionary medicine Now he returns with a book that transforms our understanding of mental disorders by exploring a fundamentally new question Instead of asking why certain people suffer from mental illness Nesse asks why natural selection has left us all with fragile minds Drawing on revealing stories from his own clinical practice and insights from evolutionary biology Nesse shows how negative emotions are useful in certain situations yet can become overwhelming Anxiety protects us from harm in the face of danger but false alarms are inevitable Low moods prevent us from wasting effort in pursuit of unreachable goals but they often escalate into pathological depression Other mental disorders such as addiction and anorexia result from the mismatch between modern environment and our ancient human past And there are good evolutionary reasons for sexual disorders and for why genes for schizophrenia persist Taken together these and many more insights help to explain the pervasiveness of human suffering and show us new paths for relieving it by understanding individuals as individuals

Darwin's Roadmap to the Curriculum Glenn Geher,David Sloan Wilson,Hadassah Head,Andrew Gallup,2019-05-01 There is a paradox when it comes to Darwinian ideas within the academy On one hand Darwin s theories have famously changed the foundational ideas related to the origins of life shaping entire disciplines in the biological sciences On the other hand people in educated societies across the globe today are famously misinformed and uneducated about Darwinian principles and ideas Applications of evolutionary theory outside the traditional areas of biology have been slow to progress and scholars doing such work regularly run into all kinds of political backlash However a slow but steady push to advance the teaching of evolution across academic disciplines has been under way for more than a decade This book serves to integrate the vast literature in the interdisciplinary field of Evolutionary Studies EvoS providing clear examples of how evolutionary concepts relate to all facets of life Further this book provides chapters dedicated to the processes associated with an EvoS education including examples of how an interdisciplinary approach to evolutionary theory has been implemented successfully at various colleges universities and degree programs This book also offers chapters outlining a variety of applications to an evolution education including improved sustainable development medical practices

and creative and critical thinking skills Exploring controversies surrounding evolution education this volume provides a roadmap to asking and answering Darwinian questions across all areas of intellectual inquiry *Animal Madness* Laurel Braitman, 2014-06-10 Science Friday Summer Reading Pick Discover magazine Top 5 Summer Reads People magazine Best Summer Reads A lovely big hearted book brimming with compassion and the tales of the many many humans who devote their days to making animals well The New York Times Have you ever wondered if your dog might be a bit depressed How about heartbroken or homesick *Animal Madness* takes these questions seriously exploring the topic of mental health and recovery in the animal kingdom and turning up lessons that Publishers Weekly calls Illuminating Braitman's delightful balance of humor and poignancy brings each case of life *Animal Madness*'s continuous dose of hope should prove medicinal for humans and animals alike Susan Orlean calls *Animal Madness* a marvelous smart eloquent book as much about human emotion as it is about animals and their inner lives It is a gem that can teach us much about the wildness of our own minds Psychology Today

The Process of Animal Domestication Marcelo Sánchez-Villagra, 2022-01-18 The first modern scholarly synthesis of animal domestication Across the globe and at different times in the past millennia the evolutionary history of domesticated animals has been greatly affected by the myriad complex and diverse interactions humans have had with the animals closest to them *The Process of Animal Domestication* presents a broad synthesis of this subject from the rich biology behind the initial stages of domestication to how the creation of breeds reflects cultural and societal transformations that have impacted the biosphere Marcelo Sánchez Villagra draws from a wide range of fields including evolutionary biology zooarchaeology ethnology genetics developmental biology and evolutionary morphology to provide a fresh perspective to this classic topic Relying on various conceptual and technical tools he examines the natural history of phenotypes and their developmental origins He presents case studies involving mammals birds fish and insect species and he highlights the importance of domestication for the comprehension of evolution anatomy ontogeny and dozens of fundamental biological processes Bringing together the most current developments *The Process of Animal Domestication* will interest a wide range of readers from evolutionary biologists developmental biologists and geneticists to anthropologists and archaeologists

Integrating Evolutionary Biology into Medical Education Jay Schulkin, Michael Power, 2019-12-19 Clinicians and scientists are increasingly recognising the importance of an evolutionary perspective in studying the aetiology prevention and treatment of human disease the growing prominence of genetics in medicine is further adding to the interest in evolutionary medicine In spite of this too few medical students or residents study evolution This book builds a compelling case for integrating evolutionary biology into undergraduate and postgraduate medical education as well as its intrinsic value to medicine Chapter by chapter the authors experts in anthropology biology ecology physiology public health and various disciplines of medicine present the rationale for clinically relevant evolutionary thinking They achieve this within the broader context of medicine but through the focused lens of maternal and child health with an emphasis on female reproduction and

the early life biochemical immunological and microbial responses influenced by evolution The tightly woven and accessible narrative illustrates how a medical education that considers evolved traits can deepen our understanding of the complexities of the human body variability in health susceptibility to disease and ultimately help guide treatment prevention and public health policy However integrating evolutionary biology into medical education continues to face several roadblocks The medical curriculum is already replete with complex subjects and a long period of training The addition of an evolutionary perspective to this curriculum would certainly seem daunting and many medical educators express concern over potential controversy if evolution is introduced into the curriculum of their schools Medical education urgently needs strategies and teaching aids to lower the barriers to incorporating evolution into medical training In summary this call to arms makes a strong case for incorporating evolutionary thinking early in medical training to help guide the types of critical questions physicians ask or should be asking It will be of relevance and use to evolutionary biologists physicians medical students and biomedical research scientists
