Trigonometry with the Calculator

You have learned about sin, cos, and tan, each is a fraction you can write using the sides of a right triangle. But what if you don't know one of those sides? That is where the calculator can help you.

We are still going to use SOHCAHTOA to help us. But we need to practice using the calculator before we get to solving any problems.

First you need to check that your calculator is in the right mode. It should be in degree mode. Try entering $\sin 30^\circ$. If you get 0.5 you are in the right mode. Otherwise you need to change it.

After you are sure that you are in degree mode we are ready to start. Your calculator has information stored into it for every possible angle measure. Enter each of these into your calculator.

1. $\cos 45^\circ$ _____ 2. $\sin 28^\circ$ _____ 3. $\tan 10^\circ$ _____ 4. $\sin 88^\circ$ _____

We could keep entering values all day and your calculator would know the answer. (But don't worry, we won't.)

Now we will do a couple of examples of how to use the calculator to solve for a missing side. Here are the steps you need to use:

1. Mark the angle that you are going to use for this problem (usually the one that you are given - careful! don't use the right angle!)
2. Label the sides in relation to the angle that you are going to use (opposite, adjacent, hypotenuse)
3. Circle the sides you are going to use to make a trig function.
4. Decide which trig function you can make with those sides (sin, cos, or tan).
5. Write the equation, using a variable for the missing side.
6. Solve the equation for the missing side. (using algebra steps)

Here are a few examples:

EX1 Find x .

1. Mark angle A (since it is the one that we know a measure for)
2. Label the sides in relation to angle A (opp., hyp.)
3. Circle those sides.
4. Decide which trig function you can make with Opp., Hyp. (sin)
5. Write the equation, using the variable x for the missing side.
6. Solve the equation for x , using algebra.

New Syllabus Mathematics Workbook Express is written in line with the new Singapore Cambridge GCE O Level Examination and the new initiatives of the Ministry of Education. The workbook consists of exercises which prepare students for their examinations. The more difficult questions are marked with an 'A' to encourage student-centred learning. The workbook includes non-routine types of worksheets that are classified under the section Alternative Assessment. These worksheets encourage students to learn independently through carefully guided steps and the use of IT. Students are motivated to investigate mathematical concepts with various methods and think critically so that they will understand and appreciate the concepts better. The teacher can gauge the students' learning by assessing the work with the scoring rubric found at the end of the relevant worksheets. The workbook is accompanied with a CD-ROM that contains templates to be used with some worksheets.
