Ceramic Fabrication Processes Franklin F. Y. Wang, 2013-10-22 Treatise on Materials Science and Technology Volume 9 Ceramic Fabrication Processes covers the fundamental properties and characterization of materials ranging from simple solids to complex heterophase systems The book discusses the powder preparation processes milling the characterization of ceramic powders and the effects of powder characteristics The text also describes dry pressing hot pressing isostatic pressing slip casting doctor blade process firing and ceramic machining and surface finishing Surface treatments mechanical behavior and methods of measuring surface texture are also considered The book further tackles crystal growth as well as controlled solidification in ceramic eutectic systems The text also looks into controlled grain growth Professional scientists and engineers as well as graduate students in materials science and associated fields will find the book invaluable

Treatise on Materials Science and Technology Herbert Herman, 2012-12-02 Treatise on Materials Science and Technology Volume 20 Ultrarapid Quenching of Liquid Alloys investigates the relationship between the science and utility of materials with emphasis on the ultrarapid quenching of liquid alloys Topics covered range from rapid solidification of non metals and crystalline iron base alloys to corrosion behavior of amorphous alloys Experimental methods in rapid quenching from the melt are also discussed This volume is comprised of nine chapters and begins with a historical overview of various methods that have evolved for producing rapidly solidified materials The criteria for the formation of highly metastable states and how these relate to experiment are described Subsequent chapters explore rapid solidification of non metals the industrial implications of rapid solidification of iron based alloys by means of plasma spraying annealing effects in metallic glasses and the corrosion behavior of amorphous alloys The mechanical properties of metallic glasses are also considered along with the electrical properties of rapidly solidified materials This book should be of interest to materials scientists and engineers as well as metallurgists researchers and students

Processing of Crystalline Ceramics Hare, 2012-12-06 This volume constitutes the Proceedings of the November 7 9 1977 Conference on PROCESSING OF CRYSTALLINE CERAMICS held at North Carolina State University in Raleigh It was the Fourteenth in a series of University Conferences on Ceramic Science initiated in 1964 and still coordinated by a founding group of four ceramic related institutions of which North Carolina State University is a charter member along with the University of California at Berkeley Notre Dame University and the New York State College of Ceramics at Alfred University In addition two other ceramic oriented schools the University of Florida and Case Western Reserve University have also hosted Conferences in the series These research oriented conferences each uniquely concerned with a timely ceramic theme have been well attended by audiences which typically were both inter national and interdisciplinary in character their published Proceedings have been well received and are frequently cited This three day conference was concerned with a scientific aspects of all process steps which must be combined and controlled effectively and sequentially in producing crystalline ceramics both oxides and nonoxides and b

Extrusion in Ceramics Frank Händle, 2009-08-12 Frank Handle 1 1 What to Expect For some time now I have been toying around with the idea of writing a book about Ceramic Extrusion because to my amazement I have been unable to locate a single existing comprehensive rundown on the subject much in contrast to say plastic extrusion and despite the fact that there are some outstanding contributions to be found about certain individual topics such as those in textbooks by Reed 1 Krause 2 Bender Handle 3 et al By way of analogy to Woody Allen s wonderfully ironic movie entitled Eve thing You Always Wanted to Know about Sex I originally intended to call this book Everything You Always Wanted to Know about Ceramic Extrusion but ter giving it some extra thought I eventually decided on a somewhat soberer title Nevertheless my companion writers and I have done our best considering our target group and their motives not to revert to the kind of jargon that people use when they think the less understandable it sounds the more scienti c it appears This book addresses all those who are looking for a lot or a little general or selective information about ceramic extrusion and its sundry aspects We realize that most of our readers will not be perusing this book just for fun or out of intellectual curiosity but because they hope to get some use out of it for their own endeavours

Electroceramics: Materials, Properties, Applications A. J. Moulson, J. M. Herbert, 1990-02 A comprehensive treatment of the many aspects of ceramics that are important because of their electrical applications Describes the fundamentals of how electroceramics function how they are made their properties and their applications starting from elementary principles and including the necessary physical chemical and mathematical background Whenever appropriate a strong emphasis is placed on the relationship between microstructure and properties Outlines solid state physics beginning with atomic structure and progressing to the principles underlying the main categories of electroceramics For undergraduates in materials science Annotation copyrighted by Book News Inc Portland OR
