Complete Herb Gardening Lisa H Gregory Ph D,2020-06-23 There are many ways to define an herb In the botanical sense an herb is an herbaceous plant that lacks a woody stem and dies to the ground each winter Another definition describes herbs as any plant or plant part that has historically been used for culinary or fragrance purposes And a broad definition of an herb is defined as a useful plant but one has to wonder what is meant by useful Herbs are easy to grow With a broad look at the word herb it is possible to include hundreds of plants that fit the definition While many herbs are in fact herbaceous there are a lot that do develop woody stems A gardener may wish to choose herb plants that have culinary value and aromatic value And in addition to these traditional qualities many herbs also offer a great deal of ornamental value to the garden as well Herbs can be classified as being either annual perennial or biennial depending on whether they need to grow from seed each year or come back from overwintering crowns roots or bulbs There are many herbs classified as tender perennials that are sold in parts of the country that do not allow them to overwinter successfully outdoors These herbs are often grown in containers during the summer months and moved indoors before cold weather where they are overwintered in a sunny location of the home Then next season they are moved back outdoors It is good to note the hardiness zones of the perennial herbs you buy and the hardiness zone where you garden This helps to avoid disappointment thinking the herb you bought will be a permanent part of the garden when it may not be for the zone in which you are located This necessitates planning on how you are going to overwinter the plant for next season
