Pediatric Neurology, Part I Olivier Dulac, Maryse Lassonde, Harvey B. Sarnat, 2013-04-24 The child is neither an adult miniature nor an immature human being at each age it expresses specific abilities that optimize adaptation to its environment and development of new acquisitions Diseases in children cover all specialties encountered in adulthood and neurology involves a particularly large area ranging from the brain to the striated muscle the generation and functioning of which require half the genes of the whole genome and a majority of mitochondrial ones Human being nervous system is sensitive to prenatal aggression is particularly immature at birth and development may be affected by a whole range of age dependent disorders distinct from those that occur in adults Even diseases more often encountered in adulthood than childhood may have specific expression in the developing nervous system The course of chronic neurological diseases beginning before adolescence remains distinct from that of adult pathology not only from the cognitive but also motor perspective right into adulthood and a whole area is developing for adult neurologists to care for these children with persisting neurological diseases when they become adults Just as pediatric neurology evolved as an identified specialty as the volume and complexity of data became too much for the general pediatrician or the adult neurologist to master the discipline has now continued to evolve into so many subspecialties such as epilepsy neuromuscular disease stroke malformations neonatal neurology metabolic diseases etc that the general pediatric neurologist no longer can reasonably possess in depth expertise in all areas particularly in dealing with complex cases Subspecialty expertise thus is provided to some trainees through fellowship programmes following a general pediatric neurology residency and many of these fellowships include training in research Since the infectious context the genetic background and medical practice vary throughout the world this diversity needs to be represented in a pediatric neurology

Self-Reg Dr. Stuart Shanker, 2016-06-21 There's no such thing as a bad kid That's what a lifetime of experience has taught Dr Stuart Shanker No matter how difficult out of control distracted or exhausted a child might seem there's a way forward self regulation Overturning decades of conventional wisdom this radical new technique allows children and the adults who care for them to regain their composure and peace of mind Self Reg is a groundbreaking book that presents an entirely new understanding of your child's emotions and behavior and a practical guide for parents to help their kids engage calmly and successfully in learning and life Grounded in decades of research and working with children and parents by Dr Shanker Self Reg realigns the power of the parent child relationship for positive change Self regulation is the nervous system's way of responding to stress We are seeing a generation of children and teens with excessively high levels of stress and as a result an explosion of emotional social learning behavior and physical health problems But few parents recognize the hidden stressors that their children are struggling with physiological as well as social and emotional An entrenched view of child rearing sees our children as lacking self control or willpower but the real basis for these problems lies in excessive stress Self regulation can dramatically improve a child's mood attention and concentration It can help children to feel empathy and to cultivate the sorts of virtues that most parents know are vital for their child's long term wellbeing Self regulation brings about profound and lasting transformation that continues throughout life Dr Shanker translates decades of his findings from working with children into practical prescriptive advice for parents giving them concrete ways to develop their self regulation skills and teach their children to do the same and engage successfully with life for optimal learning social and emotional growth
