*Transforming Psychology* Stephanie Riger, 2000-09-07 Over the last two decades a rich diverse yet sometimes contradictory body of research has been gathered under the general rubric of psychology of women This burgeoning literature represents several disciplines among them psychology psychiatry sociology political science and women's studies To bring sense to this agglomeration of views both for the layperson and the student the author looks at research in this area as a social process and refutes the notion that science can be objective about its search for universal truths She asks us to reflect on how we choose among explanations of behavior calling the need to examine the psychology of women in a social and historical context Throughout the book Riger reveals how interpretive frameworks shape how we perceive research findings Her central theme suggests that social factors shape the meaning and experience of biological femaleness
