The Waning Of Humaneness:

The Waning of Humaneness Konrad Lorenz,1987 **Here All Dwell Free** Gertrud Mueller Nelson,2006-06-01 Every human being lives a fairy tale an unconscious myth that works on us shapes us and points to our truth Often the story is filled with danger and foreboding The good news is for those who examine it closely the story also carries with it balm and healing Here All Dwell Free is an in depth exploration of two classic fairy tales that have particular significance for women The Handless Maiden will resonate in a special way with women who feel powerless in the contemporary world In a similar way Briar Rose is about falling asleep and waking of abandonment and allowing oneself to be discovered by love While the stories recounted here may be ancient they speak to us today in unmistakable symbolic language inviting us to enter them live them and be made whole again The Nature & Nurture of Love Marga Vicedo,2022-12-22 The notion that maternal care and love will determine a child s emotional well being and future personality has become ubiquitous In countless stories and movies we find that the problems of the protagonists anything from the fear of romantic commitment to serial killing stem from their troubled relationships with their mothers during childhood How did we come to hold these views about the determinant power of mother love over an individual s emotional development And what does this vision of mother love entail for children and mothers In The Nature and Nurture of Love Marga Vicedo examines scientific views about children s emotional needs and mother love from World War II until the 1970s paying particular attention to John Bowlby s ethological theory of attachment behavior Vicedo tracks the development of Bowlby s work as well as the interdisciplinary research that he used to support his theory including Konrad Lorenz s studies of imprinting in geese Harry Harlow s experiments with monkeys and Mary Ainsworth s observations of children and mothers in Uganda and the United States Vicedo s historical analysis reveals that important psychoanalysts and animal researchers opposed the project of turning emotions into biological instincts Despite those substantial criticisms she argues that attachment theory was paramount in turning mother love into a biological need This shift introduced a new justification for the prescriptive role of biology in human affairs and had profound and negative consequences for mothers and for the valuation of mother love **The Firecracker Boys** Dan O'Neill,2015-06-23 In 1958 Edward Teller father of the H bomb unveiled his plan to detonate six nuclear bombs off the Alaskan coast to create a new harbor However the plan was blocked by a handful of Eskimos and biologists who succeeded in preventing massive nuclear devastation potentially far greater than that of the Chernobyl blast The Firecracker Boys is a story of the U S government s arrogance and deception and the brave people who fought against it launching America s environmental movement As one of Alaska s most prominent authors Dan O Neill brings to these pages his love of Alaska s landscape his skill as a nature and science writer and his determination to expose one of the most shocking chapters of the Nuclear Age **Applied Evolutionary Psychology** S. Craig Roberts,2011-11-24 Human behaviour is marvellous in its complexity variability and unpredictability Understanding it however is not solely the role of psychologists everyone has a

vested interest in it from individuals to organisations and industry Recently biologists and psychologists have had considerable success incorporating insights from evolutionary theory to help them understand some fundamental psychological issues in a discipline now known as evolutionary psychology However to date these useful insights have not been widely applied to tackle specific practical problems or issues in society This innovative new book kick starts this process It provides a foundation for an incipient focus on applications of evolutionary research It draws together a collection of renowned academics from a disparate set of fields whose common interest lies in using evolutionary thinking to inform their research Topics range from reviews of evolutionary perspectives on adult and family relationships insights into business economics and marketing health and interactions with technology and the media through to major global and societal issues such as promoting green behaviour cooperation and public health and tackling crime terrorism and prejudice No other book has focused as specifically and with such broad scope on the applications of modern evolutionary psychology While the rapidly growing number of books on evolutionary psychology succeed in describing current theoretical thinking illustrated and supported by empirical studies this book uses this established basis as a backdrop and starting point for a more focused exploration of practical application This groundbreaking book will be valuable for students and researchers in evolutionary and applied psychology as well as biology and anthropology

Biology and Political Science

Robert Blank, Samuel M. Hines Jnr., 2002-03-11 This book demonstrates the increasing interest of some social scientists in the theories research and findings of life sciences in building a more interdisciplinary approach to the study of politics It discusses the development of biopolitics as an academic perspective within political science reviews the growing literature in the field and presents a coherent view of biopolitics as a

framework for structuring inquiry across the current subfields of political science Science and the Akashic Field Ervin Laszlo, 2007-05-03 Presents the unifying world concept long sought by scientists mystics and sages an Integral Theory of Everything Explains how modern science has rediscovered the Akashic Field of perennial philosophy New edition updates ongoing scientific studies presents new research inspired by the first edition and includes new case studies and a section on animal telepathy Mystics and sages have long maintained that there exists an interconnecting cosmic field at the roots of reality that conserves and conveys information a field known as the Akashic record Recent discoveries in vacuum physics show that this Akashic Field is real and has its equivalent in science s zero point field that underlies space itself This field consists of a subtle sea of fluctuating energies from which all things arise atoms and galaxies stars and planets living beings and even consciousness This zero point Akashic Field is the constant and enduring memory of the universe It holds the record of all that has happened on Earth and in the cosmos and relates it to all that is yet to happen In Science and the Akashic Field philosopher and scientist Ervin Laszlo conveys the essential element of this information field in language that is accessible and clear From the world of science he confirms our deepest intuitions of the oneness of creation in the Integral Theory of Everything We discover that as philosopher William James stated We are like islands in the sea separate on the surface but connected in the deep *Mortgaging the Earth* Bruce Rich, 2014-06-03 This critique of World Bank operations examines the effects of this organization on the societies in which it operates Highly critical of the Bank s practices in its 50 years of operation the author demonstrates how the Bank has become virtually unaccountable and a law unto itself He describes how the Bank has supported oppressive regimes and loaned money to support large projects which have displaced local populations He argues further that the Bank s current policies of structural adjustment are arresting the development of Third World countries **Evolutionary Restraints** Mark E. Borrello, 2024-05-31 Much of the evolutionary debate since Darwin has focused on the level at which natural selection occurs Most biologists acknowledge multiple levels of selection from the gene to the species The debate about group selection however is the focus of Mark E Borrello s Evolutionary Restraints Tracing the history of biological attempts to determine whether selection leads to the evolution of fitter groups Borrello takes as his focus the British naturalist V C Wynne Edwards who proposed that animals could regulate their own populations and thus avoid overexploitation of their resources By the mid twentieth century Wynne Edwards became an advocate for group selection theory and led a debate that engaged the most significant evolutionary biologists of his time including Ernst Mayr G C Williams and Richard Dawkins This important dialogue bled out into broader conversations about population regulation environmental crises and the evolution of human social behavior By examining a single facet in the long debate about evolution Borrello provides powerful insight into an intellectual quandary that remains relevant and alive to this day
