The Water Footprint Of Modern Consumer Society:

The Water Footprint of Modern Consumer Society Arjen Y. Hoekstra, 2013-06-19 Water is not only used in the domestic context but also in agriculture and industry in the production of commercial goods from food to paper. The water footprint is an indicator of freshwater use that looks at both direct and indirect use of water by a consumer or producer. The water footprint of an individual, community or business is defined as the total volume of freshwater that is used to produce the goods and services consumed by the individual or community or produced by the business. This book shows how the water footprint concept can be used to quantify and map the water use behind consumption and how it can guide reduction of water use to a sustainable level. With a number of case studies it illustrates water use along supply chains and that water consumption at one place is often linked to water use at another. For example, it is calculated that it takes 15 000 litres of water to produce 1 kg of beef or 8 000 litres of water to produce a pair of jeans. The book shows that imports of water intensive products can highly benefit water scarce countries but also that this creates a dependency on foreign water resources. The book demonstrates how water scarce regions sometimes nevertheless use lots of water for making export products. It raises the issue of sustainable consumption: how can consumers, businesses and governments get involved in reducing the water footprints of final consumer goods.

The Water Footprint of Modern Consumer Society Arjen Y. Hoekstra, 2019-06-28 Using the water footprint concept, this impactful book aids our understanding of how we can reduce water consumption and pollution to sustainable levels. Since the publication of the first edition, the question of how to reduce our water footprint has become even more urgent. Freshwater scarcity is increasingly perceived as a global systemic risk and overconsumption of water is widespread. The water footprint, a concept founded by the author, is an indicator of direct and indirect freshwater use by a consumer or producer that can be used to analyze water usage along supply chains and assess the sustainability, efficiency and fairness of our water use. This new edition is fully revised and updated to reflect continued developments in this rapidly growing field of knowledge. New chapters are added covering the history of the water footprint concept, the environmental footprint of the human species versus planetary boundaries and the human right to water as a foundation to equitable sharing. All other chapters are fully revised with new findings, applications and references, including major new research on energy, vegetarian diets and intelligent water allocation over competing demands. *The Water Footprint of Modern Consumer Society* is a key textbook for students of interdisciplinary water studies and those taking other related courses within the environmental sciences. It will also be of interest to those working in the governmental sector, environmental and consumer organizations, the business sector and UN institutions where there is growing interest in the water footprint concept.

Water Footprints and Sustainable Development Suhaib A. Bandh, Fayaz A. Malla, 2024-08-09 *Water Footprints and Sustainable Development* serves as the sole comprehensive volume of the role of waste management for sustainable development. It provides an overview of the Global Scenario of water footprints in water smart cities and

technologies and investigates the critical factors that enable the sustainable developments of various industries in respect to water resources management The goal of this book is to introduce the reader to the current technologies used for reducing water footprints and to offer the necessary information and tools for sustainable development Provides detailed coverage of the role of Water Energy and Food Nexus with respect to sustainability Covers methods such as lifecycle assessment sustainability assessment multi criteria decision making and multi objective optimization modes Includes key techniques for water resources management and sustainable development

The Oxford Handbook of Food, Water and Society John Anthony Allan, Brendan Bromwich, Anthony Colman, Martin Keulertz, 2019 Society's greatest use of water is in food production which makes farmers central to global environmental management Current food value chains however do not enable farmers to both feed a growing population and steward natural resources Through a carefully curated collection of articles written by water and food system scientists and professionals including farmers this Oxford Handbook considers the interconnected issues of real water in the environment and virtual water in food value chains and investigates society's influence on both This perspective highlights considerable challenges for food security and environmental stewardship in the context of ongoing global change The book discusses these issues by region and by selected commodities emphasizing innovation needed for the food system to meet future challenges

Field Practices for Wastewater Use in Agriculture Vinod K. Tripathi, Megh R. Goyal, 2021-03-15 Field Practices for Wastewater Use in Agriculture discusses the growing importance of wastewater application in the field of agriculture Addressing the tremendous need for the irrigation sector to reduce the demand for freshwater in agriculture this volume looks at wastewater as a source for agricultural irrigation The volume is divided into four sections current and emerging issues in wastewater use in agriculture wastewater management with biological systems effective field practices for wastewater use and case studies that provide information on scientific analytical studies on the environment under the influence of wastewater quality from different pollution sources This book sheds light on the vast potential of wastewater use in agricultural irrigation while also considering safety of the agricultural products for human consumption Much emphasis has also been given to technological aspects for the treatment of wastewater to protect our environment for better public health protection
