Working Memory And Ageing Current Issues In Memory:

Working Memory and Ageing Robert H. Logie, Robin G. Morris, 2014-06-20 The rapid growth in the numbers of older people worldwide has led to an equally rapid growth in research on the changes across age in cognitive function including the processes of moment to moment cognition known as working memory This book brings together international research leaders who address major questions about how age affects working memory Why is working memory function much better preserved in some people than others In all healthy adults which aspects of working memory are retained in later years and which aspects start declining in early adulthood Can cognitive training help slow cognitive decline with age How are changes in brain structures connectivity and activation patterns related to important changes in working memory function Impairments of cognition and particularly of working memory can be major barriers to independent living The chapters of this book dispel some popular myths about cognitive ageing while presenting the state of the science on how and why working memory functions as it does throughout the adult lifespan Working Memory and Aging is the first volume to provide an overview of the burgeoning literature on changes in working memory function across healthy and pathological ageing and it will be of great interest to advanced undergraduates postgraduates and researchers in psychology and related subject areas concerned with the effects of human ageing including several areas of medicine

Working Memory and Thinking Kenneth Gilhooly, 2004-08-02 With contributions from international researchers on working memory and thinking this volume aims to break down the scientific divisions and foster scientific integration in the connections between these two core functions of cognition

Memory and Aging Moshe Naveh-Benjamin, Nobuo Ohta, 2012-05-04 Current demographical patterns predict an aging worldwide population It is projected that by 2050 more than 20% of the US population and 40% of the Japanese population will be older than 65 A dramatic increase in research on memory and aging has emerged to understand the age related changes in memory since the ability to learn new information and retrieve previously learned information is essential for successful aging and allows older adults to adapt to changes in their environment self concept and social roles This volume represents the latest psychological research on different aspects of age related changes in memory Written by a group of leading international researchers its chapters cover a broad array of issues concerning the changes that occur in memory as people grow older including the mechanisms and processes underlying these age related memory changes how these changes interact with social and cultural environments and potential programs intended to increase memory performance in old age Similarly the chapters draw upon diverse methodological approaches including cross cultural extreme group experimental designs longitudinal designs assessing intra participant change and computational approaches and neuroimaging assessment Together they provide converging evidence for stability and change in memory as people grow older for the underlying causes of these patterns as well as for the heterogeneity in older adults performance Memory and Aging is essential reading for researchers in memory cognitive aging and gerontology

False and Distorted

Memories Robert A. Nash, James Ost, 2016-10-04 Our memories shape how we think about the past how we plan for the future and how we think about ourselves Yet our memories are also constantly being reinvented we often remember our experiences differently from how they truly happened and can even remember experiences that never happened at all *False and Distorted Memories* provides an overview of recent and ongoing developments in the science of false memory World leading researchers unpick questions about flawed recollections discussing issues as varied as the reliability of highly emotional memories why we sometimes begin to remember fictional experiences that we have deliberately fabricated and what happens when we stop believing our memories Each chapter demonstrates how memory science has furthered our understanding of these important questions by exploring theoretical ideas and psychological research methods that underpin their investigations Edited by Robert Nash and James Ost this volume offers an international and up to date perspective on false and distorted memories The volume also draws attention to the broad range of real life contexts in which such distortions might arise and their potential consequences *False and Distorted Memories* illustrates the ease with which memory can be contaminated and the power of the resulting memory errors providing an integral text for researchers and students interested in the psychology of memory

Forgetting Sergio Della Sala, 2010-06-10 Memory and forgetting are inextricably intertwined In order to understand how memory works we need to understand how and why we forget The topic of forgetting is therefore hugely important despite the fact that it has often been neglected in comparison with other features of memory This volume addresses various aspects of forgetting drawing from several disciplines including experimental and cognitive psychology cognitive and clinical neuropsychology behavioural neuroscience neuroimaging clinical neurology and computational modeling The first chapters of the book discuss the history of forgetting its theories and accounts the difference between short term and long term forgetting as well as the relevance of forgetting within each of the numerous components of memory taxonomy The central part summarizes and discusses what we have learned about forgetting from animal work from computational modeling and from neuroimaging Further chapters discuss pathological forgetting in patients with amnesia and epilepsy as well as psychogenic forgetting The book concludes by focusing on the difference between forgetting of autobiographical memories versus collective memory forgetting This book is the first to address the issue of forgetting from an interdisciplinary point of view but with a particular emphasis on psychology The book is scientific and yet accessible in tone and as such is suitable for advanced undergraduate and postgraduate students of psychology and related subjects such as science and neuroscience

Issues in Aging Mark Novak, 2018-02-02 *Issues in Aging* combines social psychological biological and philosophical perspectives to present a multifaceted picture of aging Novak illustrates both the problems and the opportunities that accompany older age This text helps students understand the tremendous variability in aging and introduces them to careers working with older adults This new edition reflects the continued changes in the way we age The fourth edition has been updated to include emerging issues in aging These include the prevalence of

HIV AIDs in later life current research on mental potential in old age the creation of age friendly cities and new options for end of life care Each chapter begins with a set of learning objectives to guide students in their reading and concludes with a list of main points questions for discussion or study suggested readings and relevant web sites to consult Each chapter also includes up to date charts and graphs as well as key terms to help students understand the issues presented Break out boxes reveal the human side of aging through the stories of individuals in real life and in the media

Handbook of Cognitive Aging Scott M. Hofer, Duane F Alwin, 2008-03-20 Provides a unique perspective I am particularly impressed with the sections on innovative design and methods to investigate cognitive aging and the integrative perspectives None of the existing texts covers this material to the same level Donna J La Voie Saint Louis University The emphasis on integrating the literature with theoretical and methodological innovations could have a far reaching impact on the field Deb McGinnis Oakland University

The *Handbook of Cognitive Aging Interdisciplinary Perspectives* clarifies the differences in patterns and processes of cognitive aging Along with a comprehensive review of current research editors Scott M Hofer and Duane F Alwin provide a solid foundation for building a multidisciplinary agenda that will stimulate further rigorous research into these complex factors Key Features Gathers the widest possible range of perspectives by including cognitive aging experts in various disciplines while maintaining a degree of unity across chapters Examines the limitations of the extant literature particularly in research design and measurement and offers new suggestions to guide future research Highlights the broad scope of the field with topics ranging from demography to development to neuroscience offering the most complete coverage available on cognitive aging

Handbook of the Neuroscience of Aging Patrick R. Hof, Charles V. Mobbs, 2010-05-22 A single volume of 85 articles the *Handbook of the Neurobiology of Aging* is an authoritative selection of relevant chapters from the *Encyclopedia of Neuroscience* the most comprehensive source of neuroscience information assembled to date AP Oct 2008

The study of neural aging is a central topic in neuroscience neuropsychology and gerontology Some well known age related neurological diseases include Parkinson s and Alzheimer s but even more common are problems of aging which are not due to disease but to more subtle impairments in neurobiological systems including impairments in vision memory loss muscle weakening and loss of reproductive functions changes in body weight and sleeplessness As the average age of our society increases diseases of aging become more common and conditions associated with aging need more attention by doctors and researchers This book offers an overview of topics related to neurobiological impairments which are related to the aging brain and nervous system Coverage ranges from animal models to human imaging fundamentals of age related neural changes and pathological neurodegeneration and offers an overview of structural and functional changes at the molecular systems and cognitive levels Key pathologies such as memory disorders Alzheimer s dementia Down syndrome Parkinson s and stroke are discussed as are cutting edge interventions such as cell replacement therapy and deep brain stimulation

There is no other current single volume reference with such a comprehensive coverage and depth Authors selected are the

internationally renowned experts for the particular topics on which they write and the volume is richly illustrated with over 100 color figures A collection of articles reviewing our fundamental knowledge of neural aging the book provides an essential affordable reference for scientists in all areas of Neuroscience Neuropsychology and Gerontology The most comprehensive source of up to date data on the neurobiology of aging review articles cover normal sensory and cognitive aging neuroendocrine structural and molecular factors and fully address both pathology and intervention Chapters represent an authoritative selection of relevant material from the most comprehensive source of information about neuroscience ever assembled Encyclopedia of Neuroscience synthesizing information otherwise dispersed across a number of journal articles and book chapters and saving researchers the time consuming process of finding and integrating this information themselves Offering outstanding scholarship each chapter is written by an expert in the topic area and over 20% of chapters feature international contributors representing 11 countries Provides more fully vetted expert knowledge than any existing work with broad appeal for the US UK and Europe accurately crediting the contributions to research in those regions Fully explores various pathologies associated with the aging brain Alzheimer s dementia Parkinson s memory disorders stroke Down s syndrome etc Coverage of disorders and key interventions makes the volume relevant to clinicians as well as researchers Heavily illustrated with over 100 color figures [The Encyclopedia of Adulthood and Aging, 3 Volume Set](#)
