Exploring New Frontiers of Theoretical Informatics Jean-Jacques Lévy, Ernst W. Mayr, John C. Mitchell, 2004-07-27 In recent years IT application scenarios have evolved in very innovative ways Highly distributed networks have now become a common platform for large scale distributed programming high bandwidth communications are inexpensive and widespread and most of our work tools are equipped with processors enabling us to perform a multitude of tasks In addition mobile computing referring specifically to wireless devices and more broadly to dynamically configured systems has made it possible to exploit interaction in novel ways To harness the flexibility and power of these rapidly evolving interactive systems there is need of radically new foundational ideas and principles there is need to develop the theoretical foundations required to design these systems and to cope with the many complex issues involved in their construction and there is need to develop effective principles for building and analyzing such systems Reflecting the diverse and wide spectrum of topics and interests within the theoretical computer science community Exploring New Frontiers of Theoretical Informatics is presented in two distinct but interrelated tracks Algorithms Complexity and Models of Computation Logic Semantics Specification and Verification Exploring New Frontiers of Theoretical Informatics contains 46 original and significant contributions addressing these foundational questions as well as 4 papers by outstanding invited speakers These papers were presented at the 3rd IFIP International Conference on Theoretical Computer Science TCS 2004 which was held in conjunction with the 18th World Computer Congress in Toulouse France in August 2004 and sponsored by the International Federation for Information Processing IFIP

Advances in Computing Science - ASIAN 2000 Jifeng He, Masahiko Sato, 2003-07-31 The Asian Computing Science Conference ASIAN series was initiated in 1995 to provide a forum for researchers in computer science in Asia to meet and to promote interaction with researchers from other regions The previous ve conferences were held respectively in Bangkok Singapore Kathmandu Manila and Phuket The proceedings were published in the Lecture Notes in Computer Science Series of Springer Verlag This year s conference ASIAN2000 attracted 61 submissions from which 18 papers were selected through an electronic program committee PC meeting The themes for this year s conference are Logics in Computer Science Data Mining Networks and Performance The key note speaker for ASIAN2000 is Jean Vuillemin ENS France and the invited speakers are Ramamohanarao Kotagiri U

Melbourne Australia and Alain Jean Marie LIRMM France We thank them for accepting our vitation This year s conference is sponsored by the Asian Institute of Technology Thailand INRIA France the National University of Singapore Singapore and UNU IIST Macau SAR China We thank all these institutions for their continued support of the ASIAN series This year s conference will be held in Penang Malaysia We are much obliged to Universiti Sains Malaysia and Penang State Government for providing the conference venue and to Dr Abdullah Zawawi Haji Talib for making the local arrangements We also wish to thank the PC members and the large number of referees for the substantial work put in by them in assessing the submitted papers

Relations and Kleene Algebra in Computer Science Rudolf Berghammer, Bernhard Möller, Georg Struth, 2008-03-28 The book constitutes the joint refereed proceedings of the 10th International Conference on Relational Methods in Computer Science RelMiCS 2008 and the 5th International Conference on Applications of Kleene Algebras AKA 2008 held in Manchester UK in April 2008 The 26 revised full papers presented together with 2 invited papers were carefully reviewed and selected from numerous submissions The papers describe the calculus of relations and similar algebraic formalisms as methodological and conceptual tools with special focus on formal methods for software engineering logics of programs and links to neighbouring disciplines Their scope comprises relation algebra fixpoint calculi semiring theory iteration algebras process algebras and dynamic algebras Applications include formal algebraic modeling the semantics analysis and development of programs formal language theory and combinatorial optimization

Analysis of Real-World Security Protocols in a Universal Composability Framework Max Tuengerthal, 2013 Security protocols employed in practice are used in our everyday life and we heavily depend on their security The complexity of these protocols still poses a big challenge on their comprehensive analysis To cope with this complexity a promising approach is modular security analysis based on universal composability frameworks such as Canetti s UC model This appealing approach has however only very rarely been applied to the analysis of existing real world protocols Either the analysis was not fully modular or it could only be applied to idealized variants of the protocols The main goal of this thesis therefore is to push modular protocol analysis as far as possible but without giving up on accurate modeling Our main contributions in a nutshell An ideal functionality for symmetric key cryptography that provides a solid foundation for faithful composable cryptographic analysis of real world security protocols A computational soundness result of formal analysis for key exchange protocols that use symmetric encryption Novel universal and joint state composition theorems that are applicable to the analysis of real world security protocols Case studies on several security protocols SSL TLS IEEE 802 11i WPA2 SSH IPsec and EAP PSK We showed that our new composition theorems can be used for a faithful modular analysis of these protocols In addition we proved composable security properties for two central protocols of the IEEE standard 802 11i namely the 4 Way Handshake Protocol and the CCM Protocol This constitutes the first rigorous cryptographic analysis of these protocols While our applications focus on real world security protocols our theorems models and techniques should be useful beyond this domain
