Berg-Schlosser, Bertrand Badie, Leonardo Morlino, 2020-02-11 The SAGE Handbook of Political Science presents a major retrospective and prospective overview of the discipline. Comprising three volumes of contributions from expert authors from around the world, the handbook aims to frame, assess, and synthesize research in the field, helping to define and identify its current and future developments. It does so from a truly global and cross-area perspective. Chapters cover a broad range of aspects, from providing a general introduction to exploring important subfields within the discipline. Each chapter is designed to provide a state-of-the-art and comprehensive overview of the topic by incorporating cross-cutting global interdisciplinary and where this applies, gender perspectives. The Handbook is arranged over seven core thematic sections: Part 1 Political Theory, Part 2 Methods, Part 3 Political Sociology, Part 4 Comparative Politics, Part 5 Public Policies and Administration, Part 6 International Relations, Part 7 Major Challenges for Politics and Political Science in the 21st Century. **The Oxford Handbook of Political Science** Robert E. Goodin, 2011-07-07 Drawing on the rich resources of the ten-volume series of The Oxford Handbooks of Political Science, this one-volume distillation provides a comprehensive overview of all the main branches of contemporary political science: political theory, political institutions, political behavior, comparative politics, international relations, political economy, law and politics, public policy, contextual political analysis, and political methodology. Sixty-seven of the top political scientists worldwide survey recent developments in those fields and provide penetrating introductions to exciting new fields of study. Following in the footsteps of the New Handbook of Political Science, edited by Robert Goodin and Hans Dieter Klingemann, a decade before this Oxford Handbook will become an indispensable guide to the scope and methods of political science as a whole, it will serve as the reference book of record for political scientists and for those following their work for years to come. The inclusion of chapter objectives, regular summaries, questions for discussion, and tasks and assignments makes this the must-have text for researching politics. **Issues and Methods in Comparative Politics** Todd Landman, 2002-01-04 Why do we compare nations? Integrating Knowledge Through Interdisciplinary Research

Dominic Holland, 2013-08-22 In this important new text Holland seeks to explain by means of social scientific and philosophical inquiry the difficulties that researchers often experience when attempting to integrate knowledge from different academic disciplines either individually or as part of a team of subject specialists It is argued that the difficulty of integrating knowledge from different academic disciplines is the result of firstly an inadequate justification of the nature of scientific integration and differentiation and secondly the dominance of disciplinary specialization in scientific inquiry By focusing on both the theoretical justification for and the practical feasibility of integrating knowledge through interdisciplinary research this book asks what properties of reality make the integration of knowledge from different academic disciplines possible and to what extent it is feasible to integrate knowledge through interdisciplinary research within a traditional disciplinary context Accordingly the text is both philosophical and social scientific in content philosophical in the sense that it presents a theory of causal determination which will help researchers to understand how reality is both differentiated and interconnected social scientific in the sense that it presents the results of three case studies of collaborative interdisciplinary research projects The book is heavily informed by the philosophy of critical realism The philosophical argument about the possibility of integration and specialization in science draws explicitly on some of the key concepts of critical realism particularly those comprising the theory of integrative pluralism while critical realist assumptions underpin the social scientific argument about the causal influence of the social system of knowledge production By exploring researchers conceptions of knowledge and of reality on the one hand and their decisions about what sort of knowledge to produce on the other Holland shows how the difficulty of scientific integration is both a problem of knowledge and a problem of knowledge production This book is essential reading for students and academics interested in the emerging topic of knowledge integration and interdisciplinarity
