Theory and Reality Peter Godfrey-Smith, 2003-08-01 How does science work Does it tell us what the world is really like What makes it different from other ways of understanding the universe In Theory and Reality Peter Godfrey Smith addresses these questions by taking the reader on a grand tour of one hundred years of debate about science The result is a completely accessible introduction to the main themes of the philosophy of science Intended for undergraduates and general readers with no prior background in philosophy Theory and Reality covers logical positivism the problems of induction and confirmation Karl Popper's theory of science Thomas Kuhn and scientific revolutions the views of Imre Lakatos Larry Laudan and Paul Feyerabend and challenges to the field from sociology of science feminism and science studies The book then looks in more detail at some specific problems and theories including scientific realism the theory ladenness of observation scientific explanation and Bayesianism Finally Godfrey Smith defends a form of philosophical naturalism as the best way to solve the main problems in the field Throughout the text he points out connections between philosophical debates and wider discussions about science in recent decades such as the infamous science wars Examples and asides engage the beginning student a glossary of terms explains key concepts and suggestions for further reading are included at the end of each chapter However this is a textbook that doesn't feel like a textbook because it captures the historical drama of changes in how science has been conceived over the last one hundred years Like no other text in this field Theory and Reality combines a survey of recent history of the philosophy of science with current key debates in language that any beginning scholar or critical reader can follow

An Analysis of Thomas Kuhn's The Structure of Scientific Revolutions Jo Hedesan, Joseph Tendler, 2017-07-05 Thomas Kuhn's The Structure of Scientific Revolutions can be seen without exaggeration as a landmark text in intellectual history In his analysis of shifts in scientific thinking Kuhn questioned the prevailing view that science was an unbroken progression towards the truth Progress was actually made he argued via paradigm shifts meaning that evidence that existing scientific models are flawed slowly accumulates in the face at first of opposition and doubt until it finally results in a crisis that forces the development of a new model This development in turn produces a period of rapid change
