Theory of Neural Information Processing Systems Anthony C. C. Coolen, Reimer Kühn, Peter Sollich, 2005 This interdisciplinary graduate text gives a full explicit coherent and up to date account of the modern theory of neural information processing systems and is aimed at student with an undergraduate degree in any quantitative discipline e.g. computer science physics engineering biology or mathematics. The book covers all the major theoretical developments from the 1940s tot he present day using a uniform and rigorous style of presentation and of mathematical notation. The text starts with simple model neurons and moves gradually to the latest advances in neural processing An ideal textbook for postgraduate courses in artificial neural networks the material has been class tested It is fully self contained and includes introductions to the various discipline specific mathematical tools as well as multiple exercises on each topic Theory of Neural Information Processing Systems Anthony C. theory answers these questions by deriving non asymptotic bounds on the generalization error of a model or in other words by upper bounding the true error of the learned model based just on quantities computed on the available data However for a long time Statistical learning theory has been considered only an abstract theoretical framework useful for inspiring new learning approaches but with limited applicability to practical problems The purpose of this book is to give an intelligible overview of the problems of model selection and error estimation by focusing on the ideas behind the different statistical learning theory approaches and simplifying most of the technical aspects with the purpose of making them more accessible and usable in practice The book starts by presenting the seminal works of the 80 s and includes the most recent results It discusses open problems and outlines future directions for research Artificial Neural Networks and Machine Learning -ICANN 2019: Theoretical Neural Computation Igor V.
