Thermally And Optically Stimulated Luminescence A Simulation Approach:

Thermally and Optically Stimulated Luminescence Reuven Chen, Vasilis Pagonis, 2011-04-08 Thermoluminescence TL and optically stimulated luminescence OSL are two of the most important techniques used in radiation dosimetry. They have extensive practical applications in the monitoring of personnel radiation exposure in medical dosimetry, environmental dosimetry, spacecraft nuclear reactors, food irradiation, etc. and in geological archaeological dating. Thermally and Optically Stimulated Luminescence: A Simulation Approach describes these phenomena, the relevant theoretical models, and their prediction using both approximations and numerical simulation. The authors concentrate on an alternative approach in which they simulate various experimental situations by numerically solving the relevant coupled differential equations for chosen sets of parameters. Opening with a historical overview and background theory, other chapters cover experimental measurements, dose dependence, dating procedures, trapping parameters, applications, radiophotoluminescence, and effects of ionization density. Designed for practitioners, researchers, and graduate students in the field of radiation dosimetry, Thermally and Optically Stimulated Luminescence provides an essential synthesis of the major developments in modeling and numerical simulations of thermally and optically stimulated processes.

Advances In Physics And Applications Of Optically And Thermally Stimulated Luminescence Reuven Chen, Vasilis Pagonis, 2019-03-06 In this volume, international leading experts in the study of thermally and optically stimulated luminescence give an up-to-date comprehensive coverage of the theoretical and experimental aspects of these subjects, as well as their applications. The theory of thermoluminescence (TL) and optically stimulated luminescence (OSL) are discussed in detail, including mainly solid-state models of localized and delocalized transitions. These models cover the effects occurring during the excitation by irradiation and the read-out by heating or by exposure to light. The methods described consist of analytical mathematical considerations as well as numerical simulations. The main application of these effects, namely radiation dosimetry, includes personal and environmental dosimetry as well as retrospective dosimetry and the dosimetry of cosmic radiation and space missions. Also discussed in detail are archaeological and geological dating, the use of luminescence dosimetry in medical physics, as well as general applications in geosciences, other model subjects such as time-resolved luminescence and thermally assisted OSL, and the sister subject of thermoluminescence in photosynthetic materials.

A Course in Luminescence Measurements and Analyses for Radiation Dosimetry Stephen W. S. McKeever, 2022-05-16 A Course in Luminescence Measurements and Analyses for Radiation Dosimetry: A complete approach to the three key techniques in luminescence dosimetry. In A Course in Luminescence Measurements and Analyses for Radiation Dosimetry, expert researcher Stephen McKeever delivers a holistic and comprehensive exploration of the three main luminescence techniques used in radiation dosimetry: thermoluminescence, optically stimulated luminescence, and radiophotoluminescence. The author demonstrates how the three techniques are related to one another and how they compare to each other. Throughout, the author's focus is on pedagogy, including state-of-

the art research only where it is relevant to demonstrate a key principle or where it reveals a critical insight into physical mechanisms The primary purpose of the book is to teach beginning researchers about the three aforementioned techniques their similarities and distinctions and their applications A Course in Luminescence Measurements and Analyses for Radiation Dosimetry offers access to a companion website that includes original data sets and problems to be solved by the reader The book also includes A thorough introduction to the field of luminescence applications in radiation dosimetry including a history of the subject Comprehensive explorations of introductory models and kinetics including the concepts of thermoluminescence optically stimulated luminescence and radiophotoluminescence Practical discussions of luminescence curve shapes including the determination of trapping parameters from experimental thermoluminescence and optically stimulated luminescence data In depth examinations of dose response functions superlinearity supralinearity and sublinearity as well as the causes of non linearity Detailed examples with well known materials A Course in Luminescence Measurements and Analyses for Radiation Dosimetry is an invaluable guide for undergraduate and graduate students in the field of radiation dosimetry as well as faculty and professionals in the field Luminescence Signal Analysis Using Python Vasilis
