Understanding The Common Agricultural Policy Earthscan Food And Agriculture:

Understanding the Common Agricultural Policy Berkeley Hill, 2012-03-29 The majority of recent publications on the Common Agricultural Policy CAP of the European Union address current issues and specific applications There is little available which attempts to increase understanding of the nature of existing policies their development intentions problems and successes The aim of this book is to improve knowledge and understanding of the policy process and its application to the CAP focussing on the principles of policy analysis For while the details of agricultural and environmental policies evolve the principles upon which they are based endure The author uses economics as a basis for his exploration as fairly simple economics holds the key to understanding many of the fundamental pressures to which agriculture and rural areas are subject He explains the importance of the political and administrative context in which the process occurs acknowledging the influence of environmental and sociological concerns Such knowledge of the conceptual framework of the policy process and its application to the CAP is essential for all concerned with agriculture and rural livelihoods both within the European Union and in those countries trading with the EU This includes both students and professionals The book provides an understanding of these principles in terms of how and why policy changes thus increasing the efficiency and efficacy of the process

The Neoliberal Regime in the Agri-Food Sector Steven Wolf, Alessandro Bonanno, 2013-12-04 For the last three decades the Neoliberal regime emphasising economic growth through deregulation market integration expansion of the private sector and contraction of the welfare state has shaped production and consumption processes in agriculture and food These institutional arrangements emerged from and advanced academic and popular beliefs about the virtues of private market based coordination relative to public state based problem solving This book presents an informed constructive dialogue around the thesis that the Neoliberal mode of governance has reached some institutional and material limits Is Neoliberalism exhausted How should we understand crisis applied to Neoliberalism What are the opportunities and risks linked to the construction of alternatives The book advances a critical evaluation of the evidence supporting claims of rupture of or incursions into the Neoliberal model It also analyzes pragmatic

responses to these critiques including policy initiatives social mobilization and experimentation at various scales and points of entry The book surveys and synthesizes a range of sociological frames designed to grapple with the concepts of regimes systemic crisis and transitions Contributions include historical analysis comparative analysis and case studies of food and agriculture from around the globe These highlight particular aspects of crisis and responses including the potential for continued resilience a neo productivist return as well as the emergence and scaling up of alternative models *The Elgar Companion to the European Union* Samuel B.H. Faure,Christian Lequesne,2023-01-20 Constituting a major contribution to literature on the EU this comprehensive Companion analyses the structure and value of the EU capturing the normality of its politics alongside crises and political breakdown Precision Agriculture for Sustainability and Environmental Protection Margaret Oliver,Thomas Bishop,Ben Marchant,2013-11-20 Precision agriculture PA involves the application of technologies and agronomic principles to manage spatial and temporal variation associated with all aspects of agricultural production in order to improve crop performance and environmental quality The focus of this book is to introduce a non specialist audience to the the role of PA in food security environmental protection and sustainable use of natural resources as well as its economic benefits The technologies covered include yield monitors and remote sensing and the key agronomic principles addressed are the optimal delivery of fertilizers water and pesticides to crops only when and where these are required As a result it is shown that both food production and resource efficiency can be maximized without waste or damage to the environment such as can occur from excessive fertilizer or pesticide applications The authors of necessity describe some technicalities about PA but the overall aim is to introduce readers who are unfamiliar with PA to this very broad subject and to demonstrate the potential impact of PA on the environment and economy Chapter 3 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 3 0 license The European Union Mark Corner,2014-07-23 The EU is one of the most notoriously complex international organisations It is the only supranational organisation where nation states agree to share sovereignty in some areas but not in others At the heart of the EU debate across Europe are two opposing groups one aims to devolve more sovereignty to the EU with the aim of creating a European super state and the other wishes to devolve less effectively relegating the EU to a mere discussion forum In this accessible and engaging book Mark Corner provides an essential introduction to the history and modern workings of the EU Focusing on key themes in the union s development and the debates surrounding future enlargement this book answers the key questions related to the EU and provides a one stop shop for anyone curious about future of Europe **The Politics of Land and Food Scarcity** Paolo De Castro,2013 In recent years the issue of food security has become centre stage in the global agenda Since the 2007 8 food price crisis a number of works have been published on the topic addressed from various perspectives economic social and cultural environmental agronomic and climate change Very rarely is there a comprehensive approach which also includes the crucial

issue of politics Through a multidisciplinary approach this book provides an overview of the new global challenges connected with land food supply and agriculture It also contributes to engagement in a new global food policy through a political analysis of land and food scarcity including land grabs by affluent countries in poorer nations It does not simply raise the debate rather it aspires to move forward the debate that has started with the G20 meetings It discusses how national governments local agricultural policies and supranational entities are facing the new scenario of feeding a growing population when land resources are limited and subject to competing claims

Agricultural Supply Chains and the Challenge of Price Risk John Williams,2013-12-04 This book discusses the issues of integration within food and fibre supply chains and the challenges in managing price risk The problems of integration and price risk are interwoven in agricultural supply chains with production and supply risk as well as hoarding However without supply chain integration through commercial trade markets there can be no forward market upon which forward transactions and the management of price risk can be based Without a forward market that can reduce opportunistic behaviour there is likely to be little security of supply particularly under high production risk and price uncertainty Whilst price risk management is possible under certain circumstances there are many factors that can prevent the development of forward markets or cause them to collapse thus undermining the ability to manage price risk within acceptable risk and return parameters Market positions therefore need to be valued and often settled daily due to the risk of contract default In addition the issue of currency risk and its management applies to international market positions and transactional exposures The book analyses a range of price risk management strategies from forward contracting through to futures and options hedging and finally to over the counter products Evaluation techniques are developed to aid decision making The author concludes that forward market development may be the exception rather than the norm and that whilst favourable price risk management outcomes may be possible they can sometimes be caused more by luck than through good management It is shown how tactics are an important consideration in decision making to minimize costs and losses

Sustainable Food Systems Terry Marsden,Adrian Morley,2014-01-21 In response to the challenges of a growing population and food security there is an urgent need to construct a new agri food sustainability paradigm This book brings together an integrated range of key social science insights exploring the contributions and interventions necessary to build this framework Building on over ten years of ESRC funded theoretical and empirical research centered at BRASS it focuses upon the key social economic and political drivers for creating a more sustainable food system Themes include regulation and governance sustainable supply chains public procurement sustainable spatial strategies associated with rural restructuring and re calibrated urbanised food systems minimising bio security risk and animal welfare burdens The book critically explores the linkages between social science research and the evolving food security problems facing the world at a critical juncture in the debates associated with not only food quality but also its provenance vulnerability and the inherent unsustainability of current systems of production and

consumption Each chapter examines how the links between research practice and policy can begin to contribute to more sustainable resilient and justly distributive food systems which would be better equipped to feed the world by 2050

Agriculture, Sustainability and Competition Law Martin Milán Csirszki, 2025-04-22 Through a detailed law and policy analysis this book investigates competition law and policy in relation to agricultural producers examining the topic in light of both the neoliberal agricultural policy and food sovereignty paradigms with a focus on their differing approaches to competition and sustainability This book addresses the increasing pressures faced by agricultural producers stemming from two major developments the shift towards neoliberal economic policies in agri food markets and the growing recognition of the agricultural sector's role in environmental degradation due to unsustainable practices These developments have provoked protests from farmers and prompted critical questions about how different agricultural and competition policy theories navigate the complex relationship between competition agriculture and sustainability By conceptualising the connections between each topic the book comprehensively analyses their interdependence While competition law experts frequently overlook the realities of the agricultural sector agricultural scholars may not fully grasp the objectives of competition law By bridging these divides the book provides an integrated understanding of competition and agricultural policy also with a particular focus on sustainability This book will be of interest to researchers in the field of agricultural law and policy and competition law and policy as well as those interested in sustainability
