Unit Issues In Archaeology Measuring Time Space And Material:

Unit Issues in Archaeology Ann Felice Ramenofsky, Anastasia Steffen, 1998 This volume emphasizes one aspect of scientific method units of measure and their construction as applied to archaeology Attributes artifact classes locational designations temporal periods sampling universes culture stages and geographic regions are all examples of constructed units

Applying Evolutionary Archaeology Michael J. O'Brien, R. Lee Lyman, 2000-03-31 This book is an in depth treatment of Darwinian evolutionism and its applicability to the investigation of the archaeological record The authors explain the unique position that this kind of evolutionism holds in science and how it bears on any attempt to explain change over time in the organic world demonstrate commonalities between archaeology and paleobiology and explain the principles methods and techniques the systematics inherent in the approach

Formation Processes of Maritime Archaeological Landscapes Alicia Caporaso, 2017-01-05 Research into the anthropogenic and taphonomic processes that affect the formation of maritime archaeological resources has grown significantly over the last decade in both theory and the analysis of specific sites and associated material culture The addition of interdisciplinary inquiry investigative techniques and analytical modeling from fields such as engineering oceanography and marine biology have increased our ability to trace the unique pathways through which archaeological sites progress from initial deposition to the present yet can also link individual sites into an integrated socio environmental maritime landscape This edited volume presents a global perspective of current research in maritime archaeological landscape formation processes In addition to classically considered submerged material culture and geography or those that can be accessed by traditional underwater methodology case studies include less often considered sites and landscapes These landscapes for example require archaeologists to use geophysical marine survey equipment to characterize extensive areas of the seafloor or go above the surface to access maritime archaeological resources that have received less scholarly attention

Early and Middle Woodland Landscapes of the Southeast Alice P. Wright, Edward R. Henry, 2019-10-01 Fourteen in depth case studies incorporate empirical data with theoretical concepts such as ritual aggregation and place making highlighting the variability and common themes in the relationships between people landscapes and the built environment that characterize this period of North American native life in the Southeast

Posing Questions for a Scientific Archaeology Terry L. Hunt, Carl P. Lipo, Sarah L. Sterling, 2001-06-30 Although many believe that archaeological knowledge consists simply of empirical findings this notion is false data are generated with the guidance of theory or some sense making system acting in its place whether researchers recognize this or not Failure to understand the relationship between theory and the empirical world has led to the many debates and frustrations of contemporary archaeology Despite years of trying the atheoretical empiricist foundations of archaeology have left us little but a history of storytelling and unsatisfying generalizations about historical change and human diversity The present work offers promising directions for building theoretically defensible results by providing well

designed case studies that can be used as guides or exemplars Evolutionary theory in at least some form is the foundation for a scientific archaeology that will yield scientific explanations for historical change **The Bioarchaeology of Social**

Control Ryan P. Harrod, 2017-09-20 Taking a bioarchaeological approach this book examines the Ancestral Pueblo culture living in the Four Corners region of the United States during the late Pueblo I through the end of the Pueblo III period AD 850-1300 During this time a vast system of pueblo villages spread throughout the region creating what has been called the Chaco Phenomenon named after the large great houses in Chaco Canyon that are thought to have been centers of control Through a bioarchaeological analysis of the human skeletal remains this volume provides evidence that key individuals within the hierarchical social structure used a variety of methods of social control including structural violence to maintain their power over the interconnected communities **GIS for Sustainable Development** Michele Campagna, 2005-08-29 GIS for Sustainable Development examines how GIS applications can improve collaboration in decision making among those involved in promoting sustainable development This volume reviews leading GIScience providing an overview of research topics and applications that enable GIS newcomers and professionals to apply GIScience methods to sustaina

The Transformation of the Southeastern Indians, 1540-1760 Robbie Ethridge, Charles Hudson, 2010-12-01 With essays by Stephen Davis Penelope Drooker Patricia K Galloway Steven Hahn Charles Hudson Marvin Jeter Paul Kelton Timothy Pertulla Christopher Rodning Helen Rountree Marvin T Smith and John Worth The first two hundred years of Western civilization in the Americas was a time when fundamental and sometimes catastrophic changes occurred in Native American communities in the South In The Transformation of the Southeastern Indians 1540-1760 historians anthropologists and archaeologists provide perspectives on how this era shaped American Indian society for later generations and how it even affects these communities today This collection of essays presents the most current scholarship on the social history of the South identifying and examining the historical forces trends and events that were attendant to the formation of the Indians of the colonial South The essayists discuss how Southeastern Indian culture and society evolved They focus on such aspects as the introduction of European diseases to the New World long distance migration and relocation the influences of the Spanish mission system the effects of the English plantation system the northern fur trade of the English and the French Dutch and English trade of Indian slaves and deerskins in the South This book covers the full geographic and social scope of the Southeast including the indigenous peoples of Florida Virginia Maryland the Appalachian Mountains the Carolina Piedmont the Ohio Valley and the Central and Lower Mississippi Valleys *The Oxford Handbook of Mesoamerican Archaeology* Deborah L.

Nichols, Christopher A. Pool, 2012-08-22 The Oxford Handbook of Mesoamerican Archaeology provides a current and comprehensive guide to the recent and on going archaeology of Mesoamerica Though the emphasis is on prehispanic societies this Handbook also includes coverage of important new work by archaeologists on the Colonial and Republican periods Unique among recent works the text brings together in a single volume article length regional syntheses and topical

overviews written by active scholars in the field of Mesoamerican archaeology The first section of the Handbook provides an overview of recent history and trends of Mesoamerica and articles on national archaeology programs and practice in Central America and Mexico written by archaeologists from these countries These are followed by regional syntheses organized by time period beginning with early hunter gatherer societies and the first farmers of Mesoamerica and concluding with a discussion of the Spanish Conquest and frontiers and peripheries of Mesoamerica Topical and comparative articles comprise the remainder of Handbook They cover important dimensions of prehispanic societies from ecology economy and environment to social and political relations and discuss significant methodological contributions such as geo chemical source studies as well as new theories and diverse theoretical perspectives The Handbook concludes with a section on the archaeology of the Spanish conquest and the Colonial and Republican periods to connect the prehispanic proto historic and historic periods This volume will be a must read for students and professional archaeologists as well as other scholars including historians art historians geographers and ethnographers with an interest in Mesoamerica Darwin and Archaeology John P. Hart, John Edward Terrell, 2002-05-30 The last decades of the 20th century witnessed strongly growing interest in evolutionary approaches to the human past Even now however there is little real agreement on what evolutionary archaeology is all about A major obstacle is the lack of consensus on how to define the basic principles of Darwinian thought in ways that are genuinely relevant to the archaeological sciences Each chapter in this new collection of specially invited essays focuses on a single major concept and its associated key words summarizes its historic and current uses and then reviews case studies illustrating that concept s present and probable future role in research What these authors say shows the richness and current diversity of thought among those today who insist that Darwinism has a key role to play in archaeology Each chapter includes definitions of related key words Because the same key words may have the same or different meanings in different conceptual contexts many of these key words are addressed in more than one chapter In addition to exploring key concepts collectively the book s chapters show the broad range of ideas and opinions in this intellectual arena today This volume reflects and clarifies debate today on the role of Darwinism in modern archaeology and by doing so may help shape the directions that future work in archaeology will take
