Unified Valence Bond Theory of Electronic Structure N. D. Epiotis, 2012-12-06 **Unified Valence Bond Theory of Electronic Structure** N. D. Epiotis, 2012-12-06 The bond diagrammatic representation of molecules is the foundation of MOVB theory To a certain extent this kind of representation is analogous to the one on which resonance theory is based and this fact can be projected by a comparison of the various ways in which MOVB theory depicts a species made up of three core and two ligand MO's which define two subsystems containing a total of six electrons and the ways in which resonance theory i.e. qualitative VB theory depicts a six electron six AO species such as the pi system of CH₂=CH-CH=CH₂ The 2 different pictorial representations are shown in Scheme 1 so that the analogies are made evident First of all the total MOVB diagrammatic representation of the 6⁵ species is obtained by a linear combination of three complete bond diagrams as in A1 which describe the optimal linear combination of MOVB Configuration Wavefunctions CW's By the same token a total VB diagrammatic representation of the 6⁶ species can be obtained by writing a dot structure as in B1 and taking this to mean the optimal linear combination of all VB CW's Next we can approximate the MOVB wavefunction of the 6⁵ species by one complete or detailed bond diagram A2 No simple VB representation analogy can be given in this case Alternatively we can approximate the MOVB wavefunction by a linear combination of compact bond diagrams as in A3 in the way described before

Eaton, 1982 **Unified Valence Bond Theory of Electronic Structure Applications** N. D. Epiotis, 1983 **Lecture Notes in Quantum Chemistry II** Björn O. Roos, 2012-12-06 The first volume of Lecture Notes in Quantum Chemistry Lecture Notes in Chemistry 58 Springer Verlag Berlin 1992 contained a compilation of selected lectures given at the two first European Summer Schools in Quantum Chemistry ESQC held in southern Sweden in August 1989 and 1991 respectively The notes were written by the teachers at the school and covered a large range of topics in ab initio quantum chemistry After the third summer school held in 1993 it was decided to put together a second volume with additional material Important lecture material was excluded in the first volume and has now been added Such added topics are integrals and integral derivatives SCF theory coupled cluster theory relativity in quantum chemistry and density functional theory One chapter in the present volume contains the exercise material used at the summer school and in addition solutions to all the exercises It is the hope of the authors that the two volumes will find good use in the scientific community as textbooks for students who are interested in learning more about modern methodology in molecular quantum chemistry The books will be used as teaching material in the European Summer Schools in Quantum Chemistry which are presently planned Lund in July 1994 Bjorn Roos NOTES ON HARTREE FOCK THEORY AND RELATED TOPICS Jan Almlöf Department of Chemistry University of Minnesota Minneapolis MN 55455 USA Contents 1 Introduction 2 The Born Oppenheimer Approximation 3 Determinant Wavefunctions and the Pauli Principle 4
