Using Economic Incentives to Regulate Toxic Substances Molly K. Macauley, Michael D. Bowes, Karen L.

Palmer, 2017-03-16 Using case studies the authors evaluate the potential attractiveness of incentive based policies for the regulation of four specific toxic substances chlorinated solvents formaldehyde cadmium and brominated flame retardants Originally published in 1992 the authors provide a compelling demonstration of the role of case studies in determining the appropriate regulatory approach for the specific toxic substances This is a valuable title for students concerned with environmental issues and policy making Environmental Economics and Management (Routledge Revivals) Finn

Førsund, Steinar Strøm, 2013-06-26 First published in 1988 this book examines pollution and natural resources in relation to economic analysis The section on pollution looks at areas such as the main problems in the field at the time possible remedies and the environmental costs involved In regards to natural resources the book considers both the exploitation of non renewable resources and commercial fishing The non technical introduction to the main problems set out in each chapter will appeal to the general reader whilst the formal models and more technical parts make the material equally suitable for more advanced students or those with specialist knowledge *Using Economic Incentives to Regulate Toxic Substances*

Young, Chelsea H. Congdon, 1994 **Policy Success in an Age of Gridlock** Lawrence S. Rothenberg, 2018-06-27 Since 1990 polarization hindered changing environmental policy statutorily Yet in mid 2016 the Lautenberg Act regulating toxics chemicals employed in commerce was passed winning business and environmental support What might explain this Has the Trump administration undercut the law s effects Does the Act s passage portend more progressive actions We show that the Act was a function of the status quo changing due to regulatory efforts abroad and in the United States and from outside pressures on business These influences impacted implementation with the Trump administration not targeting toxics regulation analogous to other programs Further the processes we observe for toxics may not be unique **Targeting**

Economic Incentives in Environmental Management Alaska Fisheries Science Center National, National Oceanic and Atmospheric Adminis, Et Al, 2013-06 In the 1970 s the National Oceanic and Atmospheric Administration NOAA was made to manage our oceanic and atmospheric resources The Alaska Fisheries Science Center is the research branch for marine life

and coastal oceans off parts of the U S west coast and Alaska This includes the Eastern Bering Sea where some the worlds most important commercial fishing takes place Their mission is to develop and maintain scientific exploration to help understand and manage that region s environment Over the years there have been many reports published which discuss their findings this is one of them Voluntary environmental activities of large chemical companies to assess and control industrial chemicals ,1976 **Economic Incentives for Pollution Control** William A. Irwin,1974 *Environmental Improvement Through Economic Incentives* Frederick R. Anderson,Resources for the Future,1979 Toxic Substances Control Act Grants to States U.S. Environmental Protection Agency. Office of Pesticides and Toxic Substances,United States. National Technical Information Service,1981 **Economic Incentives and Air Pollution Control** ,1995 **Private Regulation on the Environment** Lily Hsueh,2012 In recent decades in the backdrop of highly constrained government and public sector finances worldwide private forms of regulation in natural resource and environmental policy have gained political and public salience there is an increased interest in governance with government rather than governance by government This dissertation consisting of three essays investigates the policy impact of bilateral voluntary agreements one form of voluntary environmental programs and the compliance related decision making processes involving regulators corporate actors and NGO activists that have led to them The first essay of the dissertation examines the effectiveness of a bilateral voluntary agreement negotiated between the U S EPA and the pressure treated wood industry to ban the use of a poisonous arsenic compound Unlike earlier studies on voluntary programs results from dynamic panel estimation and advanced time series techniques show that the voluntary agreement has lowered arsenic use in the U S to levels not seen since the 1920s Moreover a government driven information disclosure policy namely the EPA s Toxic Release Inventory was effective in decreasing arsenic use albeit to a lesser magnitude than the industry voluntary ban Prioritizing environmental protection through financial resources as measured by Congress allocated dollars to the EPA has also reaped environmental benefits Systematic surveys of key stakeholders provide institutional political and economic insights into the impact estimates of the bilateral voluntary agreement on arsenic use Policy process tracing based on the survey data shows that the pressure treated wood industry was compelled to engage in beyond compliance action given the existence of a poison free substitute market competitive pressures and the threat of future regulation The EPA regulators casted a shadow of public law with the credible threat of future regulation by steering or encouraging voluntary action and sanctioning noncompliance once the voluntary beyond compliance action had occurred Moreover third party stakeholders such as NGO activists played an important accountability role by pressuring for and certifying firms beyond compliance environmental stewardship In the second essay I develop a theoretical framework by building on the multiple streams framework Kingdon 1984 to explain the compliance related decision making processes and apply it to two cases of successful bilateral voluntary agreements in mercury and arsenic use respectively Specifically to the problem policy and politics streams of the multiple streams

framework I add an economy stream and delineate its key variables I argue that the economy stream demarcates the roles that product substitutes market competition corporate social responsibility the market changer and the global economy play in creating incentives for businesses to partake in industry self regulation The market changer is a maverick business that engages in an action or a set of actions that completely transforms the modus operandi of the industry in which the market changer operates While both bilateral voluntary agreements achieved the negotiated chemical reduction objectives the push and pull of politics economics as well as institutional factors led to two distinctive bilateral voluntary agreements one was an outcome of industry voluntary stewardship and the other was a result of activist campaigns The final essay employ recently developed state of the art structural change and unit root tests as well as cointegration analyses to investigate whether federal regulations since the 1970s have had an effect on toxic chemical use and what the time series properties of the data reveal about policy efficacy over the long run I examine whether there is a long run equilibrium relationship among chemicals that are regulated under the same laws and whether there are clusters of chemicals e g end use sectors that use the same chemicals that share a common trend which could suggest common economic and institutional drivers Results indicate that while some toxic chemicals have been successfully reduced or phased out by regulatory efforts a majority of the toxic chemicals used in commercial products are largely driven by changes in U S GDP industrial production and private investments in research and development rather than by common political economic and institutional factors such as government regulations

Economic Incentives to Control Pollution, 1971 **Market-based Incentive Instruments for Pollution Control** Glenn P. Jenkins, Ranjit Lamech, 1992 This paper reviews the theoretical foundations for idealized pollution control market based incentives MBI It then focuses on the way in which environmental taxes deposit refund systems and tradeable pollution permits may be more suitable instruments for inducing pollution abatement behaviour A number of international examples of the implementation of such policies are reviewed *The Environment Goes to Market*, 1994 **Economic Incentives and Pollution Control Strategy** Peter Wraage, 1985
