sensitivity of testing than traditional analytic methods may do In the second edition a place has been given for the use of machine learning not only to the analysis of observational clinical data but also to that of controlled clinical trials Unlike the first edition the second edition has drawings in full color providing a helpful extra dimension to the data analysis Several machine learning methodologies not yet covered in the first edition but increasingly important today have been included in this updated edition for example negative binomial and Poisson regressions sparse canonical analysis Firth's bias adjusted logistic analysis omics research eigenvalues and eigenvectors
