G460 (SWS), side view

Intended use

The machine is intended to be used under normal conditions for the operators described in the Operator's Manual. It is not to be used for other purposes or in particularly dangerous environments, for example, an explosive atmosphere, areas with dust containing asbestos, etc. Special safety regulations must be followed and the machine must be equipped for such use. Contact the manufacturer's dealer for further information.

Engine

G460, G460, G460, G460

G460 Volvo (D1300), G460 Volvo (D1300), G460 Volvo (D1300), 4 T2 liter (217 in³) six cylinder, four stroke, diesel engine, low-emission engine which is turbocharged with charge air cooling of the air in an open loop system and has a common rail fuel system and EGR (exhaust gas recirculation) are controlled by the engine electronic control unit (ECU) software. The engine has six, replaceable cylinder liners and two valves per cylinder with replaceable valve guides and valve seat inserts. The accelerator position is transferred electrically from the accelerator pedal to the control unit (ECU). All models have EGR (exhaust gas recirculation).

The engine has six, replaceable cylinder liners and two valves per cylinder with replaceable valve guides and valve seat inserts. The accelerator position is transferred electrically from the accelerator pedal to the control unit (ECU). All models have EGR (exhaust gas recirculation).

G460

All Volvo grader models have engines that provide three different power levels depending on the gear selected by the operator.

Volvo engine power: horsepower (kW)

Engine	Volvo	Volvo
Volvo	13, 13, 13	13, 13, 13, 13, 13
Volvo	13, 13, 13, 13, 13	13, 13, 13, 13, 13
Volvo	13, 13, 13, 13	13, 13, 13, 13, 13

Electrical system

The electrical system is a 24VDC, negative ground system. Power is supplied by two 12VDC batteries connected in series. Battery charging is accomplished using a standard 50 amp alternator or an optional 80 amp alternator. Electrical power can be isolated using a battery disconnect switch.

The machine has three electronic control units (ECUs). The ECU for the instrumentation is integrated with the display unit, warning lamps and instruments, and provides the operator with information via these.

The ECU for the mechanical system signals fault sensors on the machine and these are passed on to the ECU and ECU. The ECU is placed in the electrical distribution box on the back wall of the cab.

The ECU controls the engine. For G460 engines, the ECU is installed in the cooling module. For G460 engines, the ECU is installed on the engine.

Power transmission

All machine models are equipped with the standard 170000 powershift transmission, which has 8 forward and 4 reverse speeds. All machine models can be equipped with the optional 170000 powershift transmission, which has 11 forward and 4 reverse speeds. Both transmissions are direct drive, fully synchronized units using a constant shaft design.

Rear axle / axles

Models G460, G460, G460 and G460 are equipped with the 40000 rear axle. Models G460, G460 and G460 are equipped with the 40000 rear axle. Each has an operator-controlled lock / unlock differential. Transfer wheels are chain drive.

Brake system

Hydraulically actuated, all the service brakes are located in the four tandem drive axles. The crossover dual braking circuit provides even braking on both sides of the machine.

If the engine stops or hydraulic line pressure becomes inoperative, full braking capability is available through a return system. An electric motor and hydraulic pump unit supplies the power required to bring the machine to a safe stop.

Parking brake

The parking brake is a spring applied / hydraulically released wet multiple disc brake. The brake assembly is mounted inside the rear axle housing. In the event of transmission system pressure loss, an accumulator in the circuit stores system pressure and allows the parking brake to remain released for about 30 minutes.

Steering system

The steering system is a closed center, dynamic signal, load sensing system. The hydraulic steering system incorporates two steering cylinders and the turning on is 30°. The turning wheel and articulating frame features can be used to decrease the turning radius. Secondary steering is available as an option.

Cab and Frame

Operator's cab can be provided with pressurized air conditioning and / or heating systems as options. All controls are housed in the fully adjustable steering pedestal and the right hand side console.

Engineered seating and hydraulic control lever placement ensure operator comfort and efficiency. The frame articulates 12° (models G460, G460, 12° models G460 to G460 to the left or to the right and one back value to ensure stable operation).

ROPS and ROPS

The cab is approved as a protective cab according to the ROPS and ROPS standards, see page 107. ROPS is an abbreviation of Rolling Over Protection Structure (roof protection) and ROPS is an abbreviation of Roll Over Protection Structure (roll over protection).

Never rely on any structural alterations to the cab without first, through a dealer, having discussed the alteration with personnel at the Volvo CE Engineering Department. The department will decide whether the alteration may cause the ROPS approval to become void.

Hydraulic system

The closed-center hydraulic system uses a pressure and flow compensated load sensing variable displacement pump. The pump supplies oil to the implements and the steering.

The working line is driven by a hydraulic motor. The speed is variable and is determined by various working requirements. The line operates between pre-determined minimum and maximum speeds. The line returns at its maximum speed until there is a demand for working. The speed will automatically increase with the demand for working.

Lock valves are incorporated in the blade lift, midframe lift, rear lift, wheel turn and articulation hydraulic circuits in power cylinder mode. The control levers are direct drive, hatching type located on a fully adjustable steering pedestal.
