Twelve Lectures On Architecture Algorithmic Sustainable Design:

Twelve Lectures on Architecture Nikos A. Salingaros, 2010 *Twelve Lectures on Architecture* is a profound philosophical work presented as a set of architectural lecture notes. It reads very easily explaining why certain buildings and places speak to our hearts thus illuminating many of our old assumptions about taste. Salingaros establishes using biology why traditional architecture is perceived intuitively by most people as more natural and life affirming than modernist architecture. A deep malaise of contemporary society is tied to the shocking state of architecture and urbanism in our times characterized by distorted buildings and unusable urban spaces. Salingaros is the archetypal deep thinker and punctures the pretenses of our most respected architecture critics. He is a charismatic teacher and manages to explain seemingly inaccessible concepts such as fractals, scaling, the golden mean, cellular automata, genetic algorithms, and complexity in simple hand-drawn sketches. He has found a way to translate the complexities inherent in the design of our environment into imagery that even a general reader can understand. *Twelve Lectures on Architecture* includes an excellent introduction to Christopher Alexander's recent and remarkable work on how biology and architecture intersect in humankind's unconscious perceptions. This book has the importance to change the world because it goes into things that people should have thought about but haven't. What They're Saying With Nikos as our guide, we see through the invisibility of the emperor's new clothes and we laugh or cry all the harder at the joke played on mankind by modern architecture. The Providence Journal. Salingaros is a charismatic teacher. The author presents mathematical concepts and computer technologies: fractals, cellular automata, genetic algorithms. He shows us the beauty of mathematics through its usage. Formulating his message through a broad spectrum of topics, Salingaros appears to be a true Renaissance figure. Jadwiga Zarnowiecka, professor and architect, Bialystok, Poland. This book is intended for students yet I think it should be read by everyone who is interested in or works with the built environment. Those who teach urban planning do it for their own ego, not for people who are supposed to live there. The result is an architectural object for imaginary people. Cristina Caramelo Gomes, professor and architect, Lisbon, Portugal.

[Algorithmic Sustainable Design: Twelve Lectures on Architecture](#) Nikos A. Salingaros, 2021-03-11 [Algorithmic Sustainable Design](#) Nikos Angelos Salingaros, 2013 [Handbook of Research on Visual Computing and Emerging Geometrical Design Tools](#) Amoroso, Giuseppe, 2016-04-11. Visual computing and descriptive geometry are multidisciplinary fields addressing the handling of images, 3D models, and other computer graphics. These ideas are experiencing a revival due to emergent technologies and applications available to developers. Based in traditional forms of design and architecture, these fields are currently experiencing a bounty of new research based on old principles. The *Handbook of Research on Visual Computing and Emerging Geometrical Design Tools* seeks to add to this knowledge base by considering these technologies from a designer's perspective rather than reiterating the principles of computer science. It combines aspects of geometry and representation with emerging tools for CAD generation and visualization while addressing the digital heritage of such fields. This book is an

invaluable resource for developers students of both graphic and computer generated design researchers and designers

Unified Architectural Theory: Form, Language, Complexity Nikos A. Salingaros, 2017-06-05 **Proceedings of the 8th International Conference on Construction, Architecture and Technosphere Safety** Andrey A. Radionov, Dmitrii V. Ulrikh, Vadim R. Gasiyarov, 2024-12-31 This book highlights recent findings in civil and environmental engineering and urban planning and provides an overview of the state of the art in these fields mainly in Russia and Eastern Europe A broad range of topics and issues in modern engineering are discussed including construction buildings and structures advanced materials innovative technology methods and techniques in civil engineering heating gas supply water supply and sewerage foundation engineering BIM structural reliability durability and monitoring special and unique structures construction bridge tunnel road railway engineering design and construction of hydraulic structures concrete engineering urban regeneration and sustainable development urban transport system engineering structure safety and disaster prevention water resources engineering water and wastewater treatment recycling and reuse of wastewater etc The volume gathers selected papers from the 8th International Conference on Construction Architecture and Technosphere Safety ICCATS held in Sochi Russia in September 2024 The authors are experts in various fields of engineering and all papers have been carefully reviewed Spatial Synthesis Xinyue Ye, Hui Lin, 2020-11-30 This book describes how powerful computing technology emerging big and open data sources and theoretical perspectives on spatial synthesis have revolutionized the way in which we investigate social sciences and humanities It summarizes the principles and applications of human centered computing and spatial social science and humanities research thereby providing fundamental information that will help shape future research The book illustrates how big spatiotemporal socioeconomic data facilitate the modelling of individuals economic behavior in space and time and how the outcomes of such models can reveal information about economic trends across spatial scales It describes how spatial social science and humanities research has shifted from a data scarce to a data rich environment The chapters also describe how a powerful analytical framework for identifying space time research gaps and frontiers is fundamental to comparative study of spatiotemporal phenomena and how research topics have evolved from structure and function to dynamic and predictive As such this book provides an interesting read for researchers students and all those interested in computational and spatial social sciences and humanities **Design Roots** Stuart Walker, Martyn Evans, Tom Cassidy, Amy Twigger Holroyd, Jeyon Jung, 2018-02-08 Design Roots provides a comprehensive review of culturally significant designs products and practices which are rooted to particular communities through making tradition and a sense of place Many rich traditional practices associated with community tacit knowledge and culture are being rapidly lost due to globalisation and urbanisation Yet they have much to offer for the future in terms of sustainability identity wellbeing and new opportunities in design This book considers the creative roots the place based ecologies and deep understandings of cultural significance not only in terms of history and tradition but also in terms of locale social interactions

innovation and change for the sustainment of culturally significant material productions. Importantly, these are not locked in time by sentimentality and nostalgia but are evolving, innovative and adaptive to new technologies and changing circumstances. Contributing authors explore the historical roots of culturally significant designs, products and practices, emerging directions, amateur endeavours, enterprise models, business opportunities and the changing role and contribution of design in the creation of material cultures of significance, meaning and value. An international perspective is provided through case studies and research from North and South America, Africa, Europe, Asia and Australasia, with examples including Aran jumper production in Northern Ireland, weaving in Thailand, Iranian housing design, Brazilian street design and digital crafting in the United Kingdom.

E-Planning and Collaboration: Concepts, Methodologies, Tools, and Applications
Management Association, Information Resources, 2018-06-04. As population growth accelerates, researchers and professionals face challenges as they attempt to plan for the future. E-planning is a significant component in addressing the key concerns as the world population moves towards urban environments. *E-Planning and Collaboration: Concepts, Methodologies, Tools and Applications* contains a compendium of the latest academic material on the emerging interdisciplinary areas of e-planning and collaboration. Including innovative studies on data management, urban development and crowdsourcing, this multi-volume book is an ideal source for planners, policymakers, researchers and graduate students interested in how recent technological advancements are enhancing the traditional practices in e-planning.

Istanbul Noah Billig, 2018-10-03. *Istanbul: Informal Settlements and Generative Urbanism* analyzes two informal housing settlements in Istanbul, Turkey: Karanfilkuyu and Fatih Sultan Mehmet. It examines how generatively built structures and neighbourhoods can be successfully realized in a modern, burgeoning urban context. Generative development processes adapt to existing conditions and unfold over time, but there have been relatively few examples in the 20th and 21st centuries. This book evaluates the constructs of living structures, pattern languages and generative urban design processes in relation to Istanbul's informal settlements. It provides examples of communities making liveable, dynamic and user-adapted neighbourhoods and establishes them as a modern settlement typology in generative urban design theory.
