Handbook of Agricultural Biotechnology, Volume 5

Charles Oluwaseun Adetunji, Chukwuebuka Egbuna, Anton Fikai, Oluwatosin Ademola Ijabadeniyi, 2024-10-15. This book details recent advances in the applications of nanobiofertilizers as a substitute for synthetic fertilizers in boosting food production. With the steady rise of the world's population, there is a need to increase the production of safe and nutritious food. The constant loss of arable land as a result of various anthropogenic activities from human action has become a threat to global biodiversity and ecosystems. Additionally, the issue of climate change has imposed many obstacles to increasing agricultural productivity, especially from biotic and abiotic stressors and temperature-limited environments such as in high altitudes or seasonally hot regions. Because of these factors, there is a need to adopt sustainable and modern technologies that can boost and improve the rate of food production. One of the cheapest means of enhancing sustainable food production is to explore natural and unlimited beneficial microorganisms, particularly those that can increase the level of soil fertility, improve crop production and health, improve tolerance to stress, support nutrient uptake and availability and boost natural biodiversity. The synergistic effect of nanotechnology and beneficial microorganisms for the effective bio-fabrication of nanobiofertilizers is a sustainable solution for producing pesticide-free food. This book provides a deep insight into microbial diversity, recent techniques used for the isolation, screening and characterization of beneficial microorganisms with eco-friendly attributes.

used for bioengineering of nanobiofertilizers as well as the application of proteomics metabolomics genomics and bioinformatics The book also covers commercialization patents and the business and socio economic aspects of nanobiofertilizers as well as the role of policymakers stakeholders and government agencies in the translation of nanobiofertilizer research into policy Audience The book is a useful resource for a diverse audience including industrialists food industry professionals agriculturists agricultural microbiologists plant pathologists botanists microbiologists biotechnologists nanotechnologists microbial biotechnologists farmers policymakers and extension workers
