## **Wind Energy Basics Second Edition A Guide To Home And Community Scale Wind En:**

**Wind Energy Basics** Paul Gipe, 2009-05-05 The availability of clean renewable power is without question going to be the defining challenge and goal of the 21st century and wind will lead the way Internationally acclaimed wind energy expert Paul Gipe is as soberly critical of past energy mistakes as he is convincingly optimistic about the future The overwhelming challenge of transforming our world from one of fossil carbon to one of clean power seems daunting at best and paralyzingly impractical at worst Wind Energy Basics offers a solution Wind power can realistically not only replace the lion's share of oil coal and natural gas fired electrical plants in the U S but also can add enough extra power capacity to allow for most of the cars in the nation to run on electricity Gipe explains why such a startlingly straightforward solution is eminently doable and can be accomplished much sooner than previously thought and will have the capacity to resuscitate small and regional economies Wind Energy Basics offers a how to for home based wind applications with advice on which wind turbines to choose and which to avoid He guides wind energy installers through considerations such as renewable investment strategies and gives cautionary tales of wind applications gone wrong And for the activist he suggests methods of prodding federal state and provincial governments to promote energy independence

**Energy: Wind** Donald Marples, Molly Sherlock, 2010-05-11 Since early recorded history people have been harnessing the energy of the wind In the United States in the late 19th century settlers began using windmills to pump water for farms and ranches and later to generate electricity for homes and industry Industrialism led to a gradual decline in the use of windmills The steam engine replaced European water pumping windmills and in the 1930s the Rural Electrification Administration's programs brought inexpensive electric power to most rural areas in the United States However industrialization also sparked the development of larger windmills wind turbines to generate electricity

**Nuclear Roulette** Gar Smith, 2012-10-25 Nuclear power is not clean cheap or safe With Three Mile Island Chernobyl and Fukushima the nuclear industry's record of catastrophic failures now averages one major disaster every decade After three US designed plants exploded in Japan many countries moved to abandon reactors for renewables In the United States however powerful corporations and a compliant government still defend nuclear power while promising billion dollar bailouts to operators Each new disaster demonstrates that the nuclear industry and governments lie to avoid panic to preserve the myth of safe clean nuclear power and to sustain government subsidies Tokyo and Washington both covered up Fukushima's radiation risks and when confronted with damning evidence simply raised the levels of acceptable risk to match the greater levels of exposure Nuclear Roulette dismantles the core arguments behind the nuclear industrial complex's Nuclear Renaissance While some critiques are familiar nuclear power is too costly too dangerous and too unstable others are surprising Nuclear Roulette exposes historic links to nuclear weapons impacts on Indigenous lands and lives and the ways in which the Nuclear Regulatory Commission too often takes its lead from industry rewriting rules to keep failing plants in compliance Nuclear Roulette cites NRC records showing how corporations routinely defer maintenance and lists resulting near misses in the US which average more than one per month Nuclear Roulette chronicles the problems of aging reactors uncovers the costly challenge of decommissioning explores the industry's greatest seismic risks not on California's quake prone coast but in the Midwest and Southeast and explains how solar flares could black out power grids causing the world's

400 plus reactors to self destruct This powerful expos concludes with a roundup of proven and potential energy solutions that can replace nuclear technology with a Renewable Renaissance combined with conservation programs that can cleanse the air and cool the planet
