Toilet Training and Spina Bifida

Potty training for the non-disabled child usually begins at around the age of 18 months to two years, and the child is usually 'trained' by day at around two-and-a-half years.

Every child is different and it is advisable to watch for signs in the child's development which may suggest he/she is ready to begin potty training, such as : awareness that they are passing urine or having a bowel action, waking from naps with a dry nappy, asking to have their nappy changed.

For children with spina bifida, bladder and bowel continence should be addressed at the same time and the way the bladder works should be assessed in infancy in order to protect the kidneys from damage. This should be done before starting toilet training, and

appropriate management should be in place.

Toilet training for a child with spina bifida is likely to be quite different from that of other children. Very often, damage to nerve pathways which coordinate the bladder and bowel function and promote the sensations, mean that control cannot be learnt in the usual way.

Toilet training should begin at around two years of age. The toilet should be comfortable and not damage pressure areas (the skin on the buttocks and the backs of the legs).
