The Varieties Of Reference Clarendon Paperbacks:

The Varieties of Reference Gareth Evans, 1982 Narrative, Perception, Language, and Faith E. Wright, 2005-11-16

There have been many voices in disciplines as various as philosophy history psychology hermeneutics literary theory and theology that have claimed that narrative is fundamental to all that is human Here is a book that in an engaging and amusing way presents a coherent thesis to that effect connecting the Joke and the Story with all that comedy and tragedy imply not only with our sensing and perceiving of the world but with our faith in each other and what the character of that faith should be

Action and Ethics in Aristotle and Hegel Gary Pendlebury, 2017-07-05 Pendlebury alleges that abstraction and rationalization have had a strong and malign influence on normative moral philosophy in the 20th century Criticizing writers such as Hare Rawls and Scanlon for pursuing a conception of moral philosophy that bears little resemblance to the way in which human beings actually think and conduct themselves Pendlebury instead suggests a Virtue Ethics inspired by Hegel's and Aristotle's accounts of action as a corrective to this trend showing that moral activity is historically and socially based and must address the formed character of individual agents This trend which began with the responses by Locke Hume and Kant to Descartes Meditations rendered moral philosophy individualistic and psychologistic in contrast to Aristotle and Hegel's claim that man is essentially a social creature Pendlebury argues that this should be the starting point of any account and understanding of morality which roots the concept of will in the practical activity involved in being a member of an ethical community rather than an abstract metaphysical entity that is supposedly in the possession of individuals In providing a critique of modern moral philosophy from this perspective Pendlebury's line of enquiry lends much support to Virtue Ethics as exemplified in the work of Hursthouse and Slote while taking a more combative approach with those with whom he disputes In doing so he shows that serious considerations of continental philosophy highlights the richness of moral activity absent from analytical tradition which for so long has been bent on marginalizing it

The Development of Logic William Calvert Kneale, Martha Kneale, 1962 This book traces the development of formal logic from its origins in ancient Greece to the present day The authors first discuss the work of logicians from Aristotle to Frege showing how they were influenced by the philosophical or mathematical ideas of their time They then examine developments in the present century

The Unity of the Mind D H M Brooks, 1994-02-12 The Philosophy of Charles Travis John Collins, Tamara Dobler, 2018-06-26 This volume offers a collective critical engagement with the thought of Charles Travis a leading contemporary philosopher of language and mind and a scholar of the history of analytical philosophy The work of Charles Travis is fundamentally situated in the analytical tradition yet is also radically at odds with many assumptions characteristic of the tradition especially as regards the nature of language and perception as representational capacities Twelve philosophers explore themes in his work and Travis gives extended responses The editors provide an introductory chapter which situates Travis's ideas in the context of contemporary philosophy of language and mind The volume divides into three sections relating to language thought and

perception Topics covered in detail include the nature of linguistic and perceptual representation Frege Wittgenstein the role of context in fixing speech content and the structure of thought **Knowing What To Do** Timothy Chappell, 2014 Presents what philosophical ethics can be like if freed from the idealizing and reductive pressures of conventional moral theory making the case that moral imagination is a key part of human virtue by showing the variety of roles it plays in our practical and evaluative lives *Thought-Contents* Steven E. Boër, 2006-11-23 According to our commonsense view of the matter beliefs desires intentions and the like are special kinds of internal states the possession of which by a given creature potentially explains its behavior and otherwise renders the creature intelligible to us So called folk psychology provides us with a rough and ready network of counterfactuals delimiting the role supposedly played by these internal states vis perceptual input inference and behavioral output in a normal member of our species The exact empirical details of this network do not matter here for we are not undertaking further refinement or systematization of the relevant counterfactuals Instead our topic is the ontological analysis of the internal states that occupy the nodes of this complex network and the bearing of that analysis on the truth conditions of the sentences we use to ascribe beliefs and related states The relevant counterfactuals canonically describe particular belief desire and intention states as states of believing desiring and intending that such a creature The use of infinitival clauses to describe desires and intentions is not really an exception for desiring or intending to do A or to be F is just having a self regarding desire or intention that oneself does A or that oneself is F By the lights of our commonsense psychology then to be in a particular belief desire or intention state is to bear the corresponding attitudinal relation believing desiring or intending to a certain content *The Fragmented Mind* Cristina Borgoni, Dirk Kindermann, Andrea Onofri, 2021 The thesis of mental fragmentation has recently attracted increased attention as a way of explaining facts about mind and language This volume provides an accessible introduction and essays on foundations and applications of fragmentation Mental Files in Flux François Récanati, 2016 François Recanati has pioneered the mental file framework for thinking about concepts and how we refer to the world in thought and language He now explores what happens to mental files in a dynamic setting Recanati argues that communication involves interpersonal dynamic files The Science of Subjectivity J. Neisser, 2015-04-02 Can neuroscience help explain the first person perspective The Science of Subjectivity delves into the nature of experience arguing that unconscious subjectivity is a reality Neisser identifies the biological roots of the first person showing how ancient systems of animal navigation enable creatures like us to cope with our worldly concerns Kant, Schopenhauer and Morality: Recovering the Categorical Imperative M. Walker, 2011-12-01 Addressing the perennial question why should we be moral this book argues that we can only give a truly and morally satisfying answer to that question by radically reconfiguring our conception of the self and the way it relates to others *Essays on Husserl's Logic and Philosophy of Mathematics* Stefania Centrone, 2017-09-07 Essays on Husserl's Logic and Philosophy of Mathematics sets out to fill up a lacuna in the present research on Husserl by presenting a precise account of

Husserl's work in the field of logic of the philosophy of logic and of the philosophy of mathematics. The aim is to provide an in-depth reconstruction and analysis of the discussion between Husserl and his most important interlocutors and to clarify pivotal ideas of Husserl's by considering their reception and elaboration by some of his disciples and followers such as Oskar Becker and Jacob Klein as well as their influence on some of the most significant logicians and mathematicians of the past century such as Luitzen E. J. Brouwer, Rudolf Carnap, Kurt Gödel and Hermann Weyl. Most of the papers consider Husserl and another scholar, e.g. Leibniz, Kant, Bolzano, Brentano, Cantor, Frege and trace out and contextualize lines of influence, points of contact and points of disagreement. Each essay is written by an expert of the field and the volume includes contributions both from the analytical tradition and from the phenomenological one. *Language and Reality* Michael Devitt, Kim Sterelny, 1999

What is language? How does it relate to the world? How does it relate to the mind? Should our view of language influence our view of the world? These are among the central issues covered in this spirited and unusually clear introduction to the philosophy of language. Making no pretense of neutrality, Michael Devitt and Kim Sterelny take a definite theoretical stance. Central to that stance is naturalism, that is, they treat a philosophical theory of language as an empirical theory like any other and see people as nothing but complex parts of the physical world. This leads them controversially to a deflationary view of the significance of the study of language; they dismiss the idea that the philosophy of language should be preeminent in philosophy. This highly successful textbook has been extensively rewritten for the second edition to reflect recent developments in the field.

The Labyrinth of Mind and World Sanjit Chakraborty, 2019-12-06 This book carries forward the discourse on the mind's engagement with the world. It reviews the semantic and metaphysical debates around internalism and externalism, the location of content and the indeterminacy of meaning in language. The volume analyzes the writings of Jackson, Chomsky, Putnam, Quine, Bilgrami and others to reconcile opposing theories of language and the mind. It ventures into Cartesian ontology and Fregean semantics to understand how mental content becomes world-oriented in our linguistic communication. Further, the author explores the liaison between the mind and the world from the phenomenological perspective, particularly Husserl's linguistic turn and Heidegger's intersubjective entreaty for Dasein. The book conceives of thought as a biological and socio-linguistic product which engages with the mind-world question through the conceptual and causal apparatuses of language. A major intervention in the field of philosophy of language, this book will be useful for scholars and researchers interested in philosophy, phenomenology, epistemology and metaphysics.

Black Thought Victor Peterson II, 2022-02-27 This book uncovers a logical fallacy underlying Afro-Pessimism and provides a formal theory of articulation, teasing out new reflections on race and Blackness. Afro-Pessimism maintains that Blacks, subject to a subordinate position in society, suffer a cultural death. In this monograph, Victor Peterson rejects this theory, demonstrating that Black subjectivity is inherently multiple, articulating identities appropriate to the contexts in which it finds itself and yet remaining continuous across its individual but not mutually exclusive instantiations. Peterson argues that we should consider the

mechanisms that produce the conditions under which individuals obtain positions of either dominance or subordination By providing a working logical foundation for Articulation theory within cultural studies Peterson encourages us to rethink the politics of racial identity and subjectivity in contemporary social life Encouraging critical thought about the arbitrarily determined but instrumentally objective of our global racial order this book will be of great interest to scholars of Black Studies sociology cultural studies and philosophy On Truth and Meaning Christopher Norris,2006-06-15 Christopher Norris presents a wide ranging and distinctively angled perspective on many of the most challenging topics in current philosophical debate and explores a range of issues in epistemology ethics and philosophy of mind language and logic The book marks a further stage in the author s project of developing a realist truth based approach that would point a way beyond the various unresolved dilemmas and dichotomies bequeathed by old style logical empiricism In a series of closely argued chapters Norris draws out the two chief kinds of deficit normative and causal explanatory that have characterised much recent work in the analytic line of descent He gives a shrewd diagnostic account of the rift that opened up between the two traditions of contemporary philosophic thought one consequence of which was the analytic failure to develop precisely those normative resources that were needed in order to break out of that impasse The book also engages critically with the work of Donald Davidson Saul Kripke John McDowell Hilary Putnam Neil Tennant and Crispin Wright and mounts a vigorous challenge to the prominent strain of anti realist thinking developed on logico semantic and metaphysical grounds by Michael Dummett **Consciousness and Intentionality** Grant R. Gillett,John McMillan,2001-02-13 Is there an internal relationship between consciousness and intentionality Can mental content be described in such a way so as to avoid dualism What is the influence of social context upon consciousness conceptions of self and mental content This book considers questions such as these and argues for a conception of consciousness mental content and intentionality that is anti Cartesian in its major tenets Focusing upon the rule governed nature of concepts and the grounding of the rules for concept use in the practical world intentional consciousness emerges as a phenomena that depends upon social context Given that dependence the authors consider and set aside attempts to reduce human consciousness and intentionality to phenomena explicable at biological or neuroscientific levels Series A **Revitalizing Causality** Ruth Groff,2007-12-18 This cutting edge collection of new and previously published articles by philosophers and social scientists addresses just what it means to invoke causal mechanisms or powers in the context of offering a causal explanation A unique collection it offers the reader various disciplinary and inter disciplinary divides helping to stake out a new neo Aristotelian position within contemporary debate Conceptual Flux M. Perlman,2013-04-17 How can one think about a thing think something false about it and still be thinking about that thing at all If a concept is applied to something outside its meaning how are we to say it does not mean that thing as well The problem of misrepresentation is one of the central issues in contemporary philosophy of mind Here Mark Perlman criticizes the way all contemporary theories of mental representation seek to account for misrepresentation concluding that it cannot

be explained naturalistically Specifically Perlman evaluates and criticizes the theories of mental content proposed by Fodor Dretske Millikan Block Harman and others as well as examining verificationist approaches to meaning of Quine Davidson and Stich The book goes much further than criticism however Perlman formulates a naturalistic theory of representation that reluctantly accepts the unfortunate conclusion that there is no misrepresentation He adds a pragmatic theory of content which explains apparent misrepresentation as concept change Mental representations can be good or bad in specific contexts and for specific purposes but their correctness is not a matter of truth and falsity The pragmatic approach to mental content has implications for epistemology theories of truth metaphysics psychology and AI specifically connectionist networks Readership One of the most thorough examinations of mental representation and meaning holism available this book should be read by everyone interested in the mind and how ideas can have meaning It crosses boundaries from philosophy into psychology linguistics AI and cognitive science
