Fundamentals of Developmental Cognitive Neuroscience Heather Bortfeld, Silvia A. Bunge, 2024-02-01 An exciting introduction to the scientific interface

between biological studies of the brain and behavioural studies of human development The authors trace the field from its roots in developmental psychology and neuroscience and highlight some of the most persuasive research findings before anticipating future directions the field may take They begin with a brief orientation of the brain along with genetics and epigenetics and then summarise brain development and plasticity Later chapters detail the neurodevelopmental basis of a wide variety of human competencies including perception language comprehension socioemotional development memory systems literacy and numeracy and self regulation Suitable for advanced undergraduate and graduate courses in developmental cognition or neuroscience this textbook covers the prenatal period through to infancy childhood and adolescence It is pedagogically rich featuring interviews with leading researchers learning objectives review questions further reading recommendations and numerous colour figures Instructor teaching is supported by lecture slides and a test bank

Dyslexia Julian Elliott, Rod Nicolson, 2016-05-19 Dyslexia is often presented as a clearly delineated condition that can be diagnosed on the basis of appropriate cognitive tests with corresponding forms on intervention However this approachable text explores the issues behind this assertion in bringing together leading figures in the field to debate dyslexia Julian Elliott shows that understandings and usage of the dyslexia label vary substantially with little consensus or agreement and in putting forward his critique draws upon research in several disciplinary fields to demonstrate the irrationality of these arguments Roderick I Nicolson demonstrates that current approaches to understanding identification and support of dyslexia are catastrophically flawed in terms of their failure to consider the developmental nature of dyslexia He develops two themes first that the underlying cause of dyslexia is delayed neural commitment for skills and neural circuits and second that the cause of the reading disability is the introduction of formal instruction before the dyslexic child's neural circuits for executive function are sufficiently developed He argues that a more effective and cost effective approach to identification and support involves assessment for dyslexia rather than of dyslexia Elliott and Nicolson respond to the points each other raise before Andrew Davis investigates how far the key claims of Elliott and Nicolson can withstand close conceptual investigation and explores the inherent limitations of scientific research on this topic given the value and conceptual issues concerned
