Weighted Network Analysis

Weighted Network Analysis Steve Horvath, 2011-04-30 High throughput measurements of gene expression and genetic marker data facilitate systems biologic and systems genetic data analysis strategies Gene co expression networks have been used to study a variety of biological systems bridging the gap from individual genes to biologically or clinically important emergent phenotypes Novel Methods and Applications of Weighted Gene Coexpression Network Analysis Tova Frani Fuller, 2010 **WGCNA: an R Package for Weighted Correlation Network Analysis** Applied Research Applied Research Press, 2015-09-16 Correlation networks are increasingly being used in bioinformatics applications For example weighted gene co expression network analysis is a systems biology method for describing the correlation patterns among genes across microarray samples Weighted correlation network analysis WGCNA can be used for finding clusters modules of highly correlated genes for summarizing such clusters using the module eigengene or an intramodular hub gene for relating modules to one another and to external sample traits using eigengene network methodology and for calculating module membership measures Correlation networks facilitate network based gene screening methods that can be used to identify candidate biomarkers or therapeutic targets These methods have been successfully applied in various biological contexts e g cancer mouse genetics yeast genetics and analysis of brain imaging data While parts of the correlation network methodology have been described in separate publications there is a need to provide a user friendly comprehensive and consistent software implementation and an accompanying tutorial The WGCNA package provides R functions for weighted correlation network analysis e g co expression network analysis of gene expression data The R package along with its source code and additional material are freely available at <http://www.genetics.ucla.edu/labs/horvath/CoexpressionNetwork/Rpackages/WGCNA>

Analysis of Flow in Water Distribution Networks Pramod R. Bhawe, 1991 **On the Topological Properties of the World Trade Web** Giorgio Fagiolo, 2014 This paper studies the topological properties of the World Trade Web WTW and its evolution over time by employing a weighted network analysis We show that the WTW viewed as a weighted network displays statistical features that are very different from those obtained by using a traditional binary network approach In particular we find that i the majority of existing links are associated to weak trade relationships ii the weighted WTW is only weakly disassortative iii countries holding more intense trade relationships are more clustered *Optical Engineering*, 1999 Publishes papers reporting on research and development in optical science and engineering and the practical applications of known optical science engineering and technology **An Investigation of Truck Size and Weight Limits - Technical Supplement.
