Practical Data Analysis Cookbook Tomasz Drabas, 2016-04-29 Over 60 practical recipes on data exploration and analysis About This Book Clean dirty data extract accurate information and explore the relationships between variables Forecast the output of an electric plant and the water flow of American rivers using pandas NumPy Statsmodels and scikit learn Find and extract the most important features from your dataset using the most efficient Python libraries Who This Book Is For If you are a beginner or intermediate level professional who is looking to solve your day to day analytical problems with Python this book is for you Even with no prior programming and data analytics experience you will be able to finish each recipe and learn while doing so What You Will Learn Read clean transform and store your data using Pandas and OpenRefine Understand your data and explore the relationships between variables using Pandas and D3.js Explore a variety of techniques to classify and cluster outbound marketing campaign calls data of a bank using Pandas mlpy NumPy and Statsmodels Reduce the dimensionality of your dataset and extract the most important features with pandas NumPy and mlpy Predict the output of a power plant with regression models and forecast water flow of American rivers with time series methods using pandas NumPy Statsmodels and scikit learn Explore social interactions and identify fraudulent activities with graph theory concepts using NetworkX and Gephi Scrape Internet web pages using urllib and BeautifulSoup and get to know natural language processing techniques to classify movies ratings using NLTK Study simulation techniques in an example of a gas station with agent based modeling In Detail Data analysis is the process of systematically applying statistical and logical techniques to describe and illustrate condense and recap and evaluate data Its importance has been most visible in the sector of information and communication technologies It is an employee asset in almost all economy sectors This book provides a rich set of independent recipes that dive into the world of data analytics and modeling using a variety of approaches tools and algorithms You will learn the basics of data handling and modeling and will build your skills gradually toward more advanced topics such as simulations raw text processing social interactions analysis and more First you will learn some easy to follow practical techniques on how to read write clean reformat explore and understand your data arguably the most time consuming and the most important tasks for any data scientist In the second section different independent recipes delve into intermediate topics such as classification clustering predicting and more With the help of these easy to follow recipes you will also learn techniques that

can easily be expanded to solve other real life problems such as building recommendation engines or predictive models In the third section you will explore more advanced topics from the field of graph theory through natural language processing discrete choice modeling to simulations You will also get to expand your knowledge on identifying fraud origin with the help of a graph scrape Internet websites and classify movies based on their reviews By the end of this book you will be able to efficiently use the vast array of tools that the Python environment has to offer Style and approach This hands on recipe guide is divided into three sections that tackle and overcome real world data modeling problems faced by data analysts scientist in their everyday work Each independent recipe is written in an easy to follow and step by step fashion Exploring Big Historical Data: The Historian's Macroscopic (Second Edition) Shawn Graham,Ian Milligan,Scott B Weingart,Kimberley Martin,2022-02-24 Every day more and more kinds of historical data become available opening exciting new avenues of inquiry but also new challenges This updated and expanded book describes and demonstrates the ways these data can be explored to construct cultural heritage knowledge for research and in teaching and learning It helps humanities scholars to grasp Big Data in order to do their work whether that means understanding the underlying algorithms at work in search engines or designing and using their own tools to process large amounts of information Demonstrating what digital tools have to offer and also what digital does to how we understand the past the authors introduce the many different tools and developing approaches in Big Data for historical and humanistic scholarship show how to use them what to be wary of and discuss the kinds of questions and new perspectives this new macroscopic perspective opens up Originally authored live online with ongoing feedback from the wider digital history community Exploring Big Historical Data breaks new ground and sets the direction for the conversation into the future Exploring Big Historical Data should be the go to resource for undergraduate and graduate students confronted by a vast corpus of data and researchers encountering these methods for the first time It will also offer a helping hand to the interested individual seeking to make sense of genealogical data or digitized newspapers and even the local historical society who are trying to see the value in digitizing their holdings **The Art of Feature Engineering** Pablo Duboue,2020-06-25 When machine learning engineers work with data sets they may find the results aren t as good as they need Instead of improving the model or collecting more data they can use the feature engineering process to help improve results by modifying the data s features to better capture the nature of the problem This practical guide to feature engineering is an essential addition to any data scientist s or machine learning engineer s toolbox providing new ideas on how to improve the performance of a machine learning solution Beginning with the basic concepts and techniques the text builds up to a unique cross domain approach that spans data on graphs texts time series and images with fully worked out case studies Key topics include binning out of fold estimation feature selection dimensionality reduction and encoding variable length data The full source code for the case studies is available on a companion website as Python Jupyter notebooks *Digital Research Methods for Translation Studies* Julie McDonough Dolmaya,2023-12-22 Digital

Research Methods for Translation Studies introduces digital humanities methods and tools to translation studies. This accessible book covers computer assisted approaches to data collection, data analysis, and data visualization and presentation, offering authentic examples of these approaches in both translation studies research and projects from related fields. With a diverse range of examples featuring various contexts and language combinations to ensure relevance to a wide readership, this volume covers the strengths and limitations of computer assisted research methods as well as the ethical challenges specific to this kind of research. This is an essential text for advanced undergraduate and graduate translation studies students as well as researchers looking to adopt new research methods.

Reassembling the Republic of Letters in the Digital Age Howard Hotson, Thomas Wallnig, 2019. Between 1500 and 1800 the rapid evolution of postal communication allowed ordinary men and women to scatter letters across Europe like never before. This exchange helped knit together what contemporaries called the *respublica litteraria*, a knowledge based civil society crucial to that era's intellectual breakthroughs, formative of many modern values and institutions, and a potential cornerstone of a transnational level of European identity. Ironically, the exchange of letters which created this community also dispersed the documentation required to study it, posing enormous difficulties for historians of the subject ever since. To reassemble that scattered material and chart the history of that imagined community, we need a revolution in digital communications. Between 2014 and 2018 an EU networking grant assembled an interdisciplinary community of over 200 experts from 33 different countries and many different fields for four years of structured discussion. The aim was to envisage transnational digital infrastructure for facilitating the radically multilateral collaboration needed to reassemble this scattered documentation and to support a new generation of scholarly work and public dissemination. The framework emerging from those discussions, potentially applicable also to other forms of intellectual, cultural, and economic exchange in other periods and regions, is documented in this book.

A Primer for Teaching Digital History Jennifer Guiliano, 2022-04-22. *A Primer for Teaching Digital History* is a guide for college and high school teachers who are teaching digital history for the first time or for experienced teachers who want to reinvigorate their pedagogy. It can also serve those who are training future teachers to prepare their own syllabi as well as teachers who want to incorporate digital history into their history courses. Offering design principles for approaching digital history that represent the possibilities that digital research and scholarship can take, Jennifer Guiliano outlines potential strategies and methods for building syllabi and curricula. Taking readers through the process of selecting data, identifying learning outcomes, and determining which tools students will use in the classroom, Guiliano outlines popular research methods including digital source criticism, text analysis, and visualization. She also discusses digital archives, exhibits, and collections as well as audiovisual and mixed media narratives such as short documentaries, podcasts, and multimodal storytelling. Throughout, Guiliano illuminates how digital history can enhance understandings of not just what histories are told but how they are told and who has access to them.
