LaMont Johnson, Cleborne D. Maddux, Leping Liu, 1997 To encourage teachers to share ideas and suggestions for integrating technology into the classroom *Using Technology in the Classroom* shows you how to change the way administrators, teachers, parents, and students think about the teaching and learning process. As this important book shows, technology can allow you to make the transition from teacher-directed learning to learner-centered learning, a change that will often draw in even hard-to-reach kids. More and more, society expects educators to incorporate computer and technology education into their classrooms. This book, with its specific planning and teaching strategies and advice on materials selection, implementation, and evaluation, will be your guide for making technology an integral part of your students' classroom experiences. Getting educators and school administrators to see technology as the key element in school restructuring can be an overwhelming task, but as this book shows, the practical value of getting students on computers at an early age is immense. You can accommodate a wider range of learning styles; you can guide students as they develop their problem-solving abilities and help them tap their creative energies. *Using Technology in the Classroom* shows you many practical ways for creating individualized, technology-based instructional programs and how to choose software that meets your teaching objectives, is developmentally appropriate, and can be adapted to each learning situation. To help you improve teaching and learning throughout the school years, this comprehensive guidebook discusses children's visual education, conceptual manipulation on the Internet, encouraging students to use computers in personally meaningful and practical ways, using sound in school projects, the need for culturally relevant learning activities, the spreadsheet as a problem-solving tool, cultural lag, and educational decisionmaking. *Using Technology in the Classroom* can show administrators, school board members, teachers, and university support faculty how to work together to design and use technology in the learning environment. As you will see, site-based professional development experiences that teach teachers how to use technology, multimedia, and telecommunications in the classroom are a first step for making technology a standard component of today's education system. Computers in the Classroom Andrea R. Gooden, 1996-10-07 Since 1979, Apple Computer's Educational Grants program has provided computer equipment and training to schools through a nationwide competitive process. *Computers in the Classroom* tells the inspiring stories of some of these schools, showing how technology has revived the classroom. This illustrated book is an indispensable resource for teachers and parents, showing examples of students' work and with information on funding, resources, technical support, software, and where to find electronic and print data. 100 illus. **Teaching with Technology** Priscilla Norton, Karin M. Wiburg, 2003 The distinctive characteristic of *TEACHING WITH TECHNOLOGY*, Second Edition, is its clear correlation between theory and practice. This text focuses on ways to use technology to foster learning in K-12 classrooms instead of presenting the mechanics of computer operation. Norton and Wiburg's chapters are not based on computer applications; they are based instead on how technology can support student acquisition of literacy, content knowledge, problem solving, participating in communities, and student utilization of information and systems of assessment.
