Up-to-Date Waste-to-Energy Approach Petr Stehlik, 2016-02-05 Putting forward an up to date waste to energy approach that combines experience sophisticated modeling and technical economic analysis this book

examines the current need for the maximum utilization of energy from waste and the associated environmental impacts. It outlines step by step procedures for a complex and original waste to energy approach from the idea to its industrial application. With waste incinerators and industrial plants producing large amounts of pollutants, municipalities as well as smaller decentralized operations are beginning to focus on waste research. The principal advantage of utilizing research findings is the ability to apply a complex approach from idea to industrial implementation with respect to the needs of the market established by thorough market analysis. This book builds on this concept with an original approach that takes into consideration geographical aspects, the specifics of regions, micro regions and technological units and or equipment. Key areas discussed and analyzed in the text include strategic planning of energy source locations according to the nature of the respective region or microregion, types and amounts of wastes, logistics etc. using original mathematical models, consideration of on site processing of various types of waste taking into account the character of the region, agricultural, industrial etc., tailor made technologies for energy recovery from various types of wastes, implementation of individual technologies with original elements and support for environmental protection based on advanced flue gas i.e. off gas in the case of incineration, cleaning methods.

PEM Fuel Cells with Bio-Ethanol Processor Systems Marta S. Basualdo, Diego Feroldi, Rachid Outbib, 2011-10-30

An apparently appropriate control scheme for PEM fuel cells may actually lead to an inoperable plant when it is connected to other unit operations in a process with recycle streams and energy integration. *PEM Fuel Cells with Bio Ethanol Processor Systems* presents a control system design that provides basic regulation of the hydrogen production process with PEM fuel cells. It then goes on to construct a fault diagnosis system to improve plant safety above this control structure. *PEM Fuel Cells with Bio Ethanol Processor Systems* is divided into two parts: the first covers fuel cells and the second discusses plants for hydrogen production from bio ethanol to feed PEM fuel cells. Both parts give detailed analyses of modeling, simulation, advanced control and fault diagnosis. They give an extensive in depth discussion of the problems that can occur in fuel cell systems and propose a way to control these systems through advanced control algorithms. A significant part of the book is also given over to computer aided engineering software tools that can be used to evaluate the dynamic performance of the overall plant. *PEM Fuel Cells with Bio Ethanol Processor Systems* is intended for use by researchers and advanced students on chemical, electrical, electronic and mechanical engineering courses in which dynamics and control are incorporated with the traditional steady state coverage of flowsheet synthesis, engineering economics and optimization.
