Handbook of Combinatorial Optimization Ding-Zhu Du, Panos M. Pardalos, 2013-03-14 Combinatorial or discrete optimization is one of the most active fields in the interface of operations research computer science and applied mathematics Combinatorial optimization problems arise in various applications including communications network design VLSI design machine vision air line crew scheduling corporate planning computer aided design and manufacturing database query design cellular telephone frequency assignment constraint directed reasoning and computational biology Furthermore combinatorial optimization problems occur in many diverse areas such as linear and integer programming graph theory artificial intelligence and number theory All these problems when formulated mathematically as the minimization or maximization of a certain function defined on some domain have a commonality of discreteness Historically combinatorial optimization starts with linear programming Linear programming has an entire range of important applications including production planning and distribution personnel assignment finance allocation of economic resources circuit simulation and control systems Leonid Kantorovich and Tjalling Koopmans received the Nobel Prize 1975 for their work on the optimal allocation of resources Two important discoveries the ellipsoid method 1979 and interior point approaches 1984 both provide polynomial time algorithms for linear programming These algorithms have had a profound effect in combinatorial optimization Many polynomial time solvable combinatorial optimization problems are special cases of linear programming e.g. matching and maximum flow In addition linear programming relaxations are often the basis for many approximation algorithms for solving NP hard problems e.g. dualheuristics

Handbook of Space Technology Wilfried Ley, Klaus Wittmann, Willi Hallmann, 2009-03-18 Twenty years since the first edition was published in the German language and just over fifty years since the launch of the Earth's first ever artificial satellite Sputnik 1 this third edition of the Handbook of Space Technology presents in fully integrated colour a detailed insight into the fascinating world of space for the first time in the English language Authored by over 70 leading experts from universities research institutions and the space industry this comprehensive handbook describes the processes and methodologies behind the development construction operation and utilization of space systems presenting the profound changes that have occurred in recent years in the engineering materials processes and even politics associated with space technologies and utilization The individual chapters are self contained enabling the reader to gain a quick and reliable overview of a selected field an extensive reference and keyword list helps those who wish to deepen their understanding of individual topics Featuring superb full colour illustrations and photography throughout this interdisciplinary reference contains practical hands on engineering and planning information that will be invaluable to those on a career path within space technology or simply for those of us who'd like to know more about this fascinating industry Main section headings include Introduction historical overview space missions Fundamentals orbital mechanics aerothermodynamics reentry space debris Launch Vehicles staged technologies propulsion systems launch

Autonomous Management Systems for Spacecraft Jianjun Zhang, Jing Li, 2023-08-22 This book examines the autonomous management of spacecraft which uses modern control technologies such as artificial intelligence to establish a remote intelligent body on the spacecraft so that the spacecraft can complete its flight tasks by itself Its goal is to accurately perceive its own state and external environment without relying on external information injection and control or rely on external control as little as possible make various appropriate decisions based on this information and user tasks and be able to autonomously control spacecraft to complete various tasks Divides the autonomous management level of spacecraft into two levels Basic autonomy to meet spacecraft health requirements namely autonomous health management and autonomy of the advanced stage Divides the implementation of spacecraft autonomous management into three aspects Autonomous health management of spacecraft the spacecraft can monitor and sense its own state and can autonomously detect isolate and recover from faults Autonomous mission management the spacecraft can directly receive the mission formulate a reasonable plan according to the current state and working environment of the spacecraft and convert the mission into a specific sequence of instructions Spacecraft autonomous data management the spacecraft processes a large amount of raw data and extracts useful information and autonomously executes or changes flight tasks The autonomous management model of the spacecraft is divided into two points Compatibility the existing traditional control systems belong to the execution layer logic and are compatible with the existing systems Scalability it adopts a layered structure and each layer has different autonomous capabilities *U.S. Government Research Reports*, 1964 *Aerospace Medicine and Biology*, 1983 A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports STAR and International aerospace abstracts IAA **Remote Sensing Image Fusion** Christine Pohl, John van Genderen, 2016-10-03 Remote Sensing Image Fusion A Practical Guide gives an introduction to remote sensing image fusion providing an overview on the sensors and applications It describes data selection application requirements and the choice of a suitable image fusion technique It comprises a diverse selection of successful image fusion cases that are relevant to other users and other areas of interest

around the world The book helps newcomers to obtain a quick start into the practical value and benefits of multi sensor image fusion Experts will find this book useful to obtain an overview on the state of the art and understand current constraints that need to be solved in future research efforts For industry professionals the book can be a great introduction and basis to understand multisensor remote sensing image exploitation and the development of commercialized image fusion software from a practical perspective The book concludes with a chapter on current trends and future developments in remote sensing image fusion Along with the book RSIF website provides additional up to date information in the field
