The Planner's Use of Information Hemalata C. Dandekar, 2019-08-28 For more than 35 years planners have depended on *The Planner's Use of Information* to help them address their information needs. While the ability to manage complex information skillfully remains central to the practice of planning, the variety and quantity of information have ballooned in the last two decades. The methods of accessing and handling information, although often ultimately easier and faster, require new technical savvy. At the same time, planners themselves and the constituents they serve have changed. This completely revised and updated third edition of this popular book will serve the new generation of planners who work in a world where social media, cell phones, community embedded development, and a changing population have revolutionized the practice of planning. Edited again by Hemalata C. Dandekar with chapters by leading experts in data collection, analysis, presentation, and management, *The Planner's Use of Information* empowers practitioners to use and address the impacts of twenty-first century technologies. The book offers a range of methods for addressing many kinds of information needs in myriad situations. It is an invaluable day-to-day resource for practicing planners and an ideal classroom text for courses in planning, communication, and analytical methods. Illustrations, real-life examples, cartoons, exercises, bibliographies, and lists of online resources enrich the text.

Marketing Data Science Thomas W. Miller, 2015-05-02 Now a leader of Northwestern University's prestigious analytics program, presents a fully integrated treatment of both the business and academic elements of marketing applications in predictive analytics. Writing for both managers and students, Thomas W. Miller explains essential concepts, principles, and theory in the context of real-world applications. Building on Miller's pioneering program, *Marketing Data Science* thoroughly addresses segmentation, target marketing, brand and product positioning, new product development, choice modeling, recommender systems, pricing research, retail site selection, demand estimation, sales forecasting, customer retention, and lifetime value analysis. Starting where Miller's widely praised *Modeling Techniques in Predictive Analytics* left off, he integrates crucial information and insights that were previously segregated in texts on web analytics, network science, information technology, and programming. Coverage includes: The role of analytics in delivering effective messages on the web; Understanding the web by understanding its hidden structures; Being recognized on the web and watching your own competitors; Visualizing networks and understanding communities within them; Measuring sentiment and making recommendations; Leveraging key data science methods: databases, data preparation, classical Bayesian statistics, regression, classification, machine learning, and text analytics. Six complete case studies address exceptionally relevant issues such as separating legitimate email from spam, identifying legally relevant information for lawsuit discovery, gleaning insights from anonymous web surfing data, and more. This text's extensive set of web and network problems draw on rich public domain data sources; many are accompanied by solutions in Python and/or R. *Marketing Data Science* will be an invaluable resource for all students, faculty, and professional marketers who want to use business analytics to improve marketing performance.
