Integrating Children's Literature in the Classroom: Insights for the Primary and Early Years Educator

Rosemary Waugh, David Waugh, 2022-05-30 Teachers can have a profound influence on children's reading behaviour and attitudes to literature. Whether it's to broaden children's knowledge and understanding or encourage reading for pleasure, reading in the classroom is becoming an increasing priority. This book looks at a wide range of children's literature from picture books to classics to poetry. A diverse array of books is recommended for teachers to use in a broad variety of contexts to enhance learning across the curriculum, featuring beloved authors such as Michael Morpurgo, Tove Jansson and Kenneth Grahame, as well as introducing some who may be new to teachers. This book recognises the key role of children's literature within the curriculum and learning development. Explores examples through case studies of classroom practice and highlights children's literature's role in Personal, Social, Health and Economic (PSHE) education. Celebrates the range of voices and contexts that literature can represent in the classroom. Includes a 'For your bookshelf' section in each chapter which summarises key titles. Dedicates a chapter to the importance of creating children's literature with and for children. The authors place emphasis on creating a literate environment in which children's literature is a central feature. This is a must-read for teachers at all levels, as well as anyone who volunteers in schools to support readers. Read on to enrich your practice right across the curriculum and find diverse books to engage and inspire children. Enjoy! Professor Teresa Cremin, The Open University, UK. How do we make sure children today recognise the value of reading for pleasure when so many other mediums are competing for their attention? The answer lies within this excellent text. Megan Stephenson, PGCE Primary, ITT Lead, Leeds Trinity University, UK. It is an essential book for the primary school needed now more than ever before. Adam Bushnell, Author of *Modelling Exciting Writing* and *Descriptosaurus Story Writing*. Rosemary Waugh is a retired teacher who has written extensively on children's literature, spelling, punctuation and grammar. She is an avid collector of children's literature. She works with David to lead workshops for reading volunteers in schools for the Open University, UK, and the charity Coram Beanstalk. Value-Based Software Engineering Stefan Biffl, Aybuke Aurum, Barry Boehm, Hakan Erdogmus, Paul Grünbacher, 2006-02-23 The IT community has always struggled with questions concerning the value of an organization's investment in software and hardware. It is the goal of value based software engineering VBSE to develop models and measures of value which are of use for managers, developers and users as they make tradeoff decisions between, for example, quality and cost or functionality and schedule. Such decisions must be economically feasible and comprehensible to the stakeholders with differing value perspectives. VBSE has its roots in work on software engineering economics pioneered by Barry Boehm in the early 1980s. However, the emergence of a wider scope that defines VBSE is more recent. VBSE extends the merely technical ISO software engineering definition with elements not only from economics but also from cognitive science, finance, management science, behavioral sciences and decision sciences, giving rise to a truly multi-disciplinary framework. Biffl and his co-editors invited leading researchers and structured their contributions into three parts following an introduction into the area by Boehm himself. They first detail the foundations of VBSE followed by a presentation of state of the art methods and techniques. The third part demonstrates the benefits of VBSE through concrete examples and case studies. This book deviates from the more anecdotal style of many management oriented software engineering books and so appeals particularly to all readers who are interested in solid foundations for high level aspects of software engineering decision making, i.e. to product or project managers driven by economics and to software engineering researchers and students.
