Economic Growth and Development in the Tropics Sook Rei Tan, Haejin Jang, Jacob Wood, 2024-02-06 The living standards and scale of development around the world are vastly unequal. One notable observation is that much of the poverty stricken area is located between the tropics of Cancer and Capricorn. By contrast, affluent nations are situated in more temperate zones. Such a phenomenon gives weight to the geography hypothesis that seeks to explain the occurrence of global economic inequality by placing an emphasis on the importance of natural elements such as location and climate in determining the economic conditions of a nation. This book concentrates exclusively and in depth on the key economic phenomena and factors which shape tropical economies today. It examines contemporary economic problems confronting the tropical countries and provides policy recommendations that align with the United Nations Sustainable Development Goals set in the 2030 Agenda. It contains research works and case studies of tropical economies that are related to the area of development and environment economics. The book's themes range from economic growth, poverty reduction, income inequality, economic globalization, international trade, capital flow, financial development, and institutional development to environmental sustainability within the Tropics. Recognizing the dynamism and diversity of the tropics, the book encompasses empirical and policy analyses that address the key economic issues and challenges in the region so as to provide an important platform from which new policymaking initiatives can flourish. This book will draw readership primarily from the fields of economics and public policy, particularly under the subject areas of development and environment economics, as well as discussions in the sustainability policy space.

China's Urban Champions Kyle A. Jaros, 2019-07-23 An exploration of how key provinces in China shape urban and regional development. The rise of major metropolises across China since the 1990s has been a double-edged sword: although big cities function as economic powerhouses, concentrated urban growth can worsen regional inequalities, governance challenges, and social tensions. Wary of these dangers, China's national leaders have tried to forestall top-heavy urbanization. However, urban and regional development policies at the subnational level have not always followed suit. China's Urban Champions explores the development paths of different provinces and asks why policymakers in many cases favor big cities in a way that reinforces spatial inequalities rather than reducing them. Kyle Jaros combines in-depth case studies of Hunan, Jiangxi, Shaanxi, and Jiangsu provinces with quantitative analysis to shed light on the political drivers of uneven development. Drawing on numerous Chinese language written sources, including government documents and media reports, as well as a wealth of field interviews with officials, policy experts, urban planners, academics, and businesspeople, Jaros shows how provincial development strategies are shaped by both the horizontal relations of competition among different provinces and the vertical

relations among different tiers of government Metropolitan oriented development strategies advance when lagging economic performance leads provincial leaders to fixate on boosting regional competitiveness and when provincial governments have the political strength to impose their policy priorities over the objections of other actors Rethinking the politics of spatial policy in an era of booming growth China's Urban Champions highlights the key role of provincial units in determining the nation's metropolitan and regional development trajectory
