Noise of Polyphase Electric Motors Jacek F. Gieras, Chong Wang, Joseph Cho Lai, 2018-10-03 Controlling the level of noise in electrical motors is critical to overall system performance However predicting noise of an electrical motor is more difficult and less accurate than for other characteristics such as torque speed Recent advances have produced powerful computational methods for noise prediction and Noise of Polyphase Electric Motors is the first book to collect these advances in a single source It is also the first to include noise prediction for permanent magnet PM synchronous motors Complete coverage of all aspects of electromagnetic structural and vibro acoustic noise makes this a uniquely comprehensive reference The authors begin with the basic principles of noise generation and radiation magnetic field and radial forces torque pulsations acoustic calculations as well as noise and vibration of mechanical and acoustic origin Moving to applications the book examines in detail stator system vibration analysis including the use of finite element method FEM modal analysis FEM for radial pressure and structural modeling boundary element methods BEM for acoustic radiation statistical energy analysis SEA instrumentation including technologies procedures and standards and both passive and active methods for control of noise and vibration Noise of Polyphase Electric Motors gathers the fundamental concepts along with all of the analytical numerical and statistical methods into a unified reference It supplies all of the tools necessary to improve the noise performance of electrical motors at the design stage

Competency-Based Education in Aviation Suzanne K. Kearns, Timothy J. Mavin, Steven Hodge, 2017-05-15 Whether a trainee is studying air traffic control piloting maintenance engineering or cabin crew they must complete a set number of training hours before being licensed or certified The aviation industry is moving away from an hours based to a competency based training system Within this approach training is complete when a learner can demonstrate competent performance Training based on competency is an increasingly popular approach in aviation It allows for an alternate means of compliance with international regulations which can result in shorter and more efficient training programs However there are also challenges with a competency based approach The definition of competency based education can be confusing training can be reductionist and artificially simplistic professional interpretation of written competencies can vary between individuals and this approach can have a high administrative and regulatory burden *Competency Based Education in Aviation Exploring Alternate Training Pathways* explores this approach to training in great detail considering the four aviation professional groups of air traffic control pilots maintenance engineers and cabin crew Aviation training experts were interviewed and have contributed professional insights along with personal stories and anecdotes associated with competency based approaches in their fields Research based and practical strategies for the effective creation delivery and assessment of
