Houry, 2014-09-01 Molecular chaperones are a fundamental group of proteins that have been identified only relatively recently They are key components of a protein quality machinery in the cell which insures that the folding process of any newly synthesized polypeptide chain results in the formation of a properly folded protein and that the folded protein is maintained in an active conformation throughout its functional lifetime Molecular chaperones have been shown to play essential roles in cell viability under both normal and stress conditions Chaperones can also assist in the unfolding and degradation of misfolded proteins and in disaggregating preformed protein aggregates Chaperones are also involved in other cellular functions including protein translocation across membranes vesicle fusion events and protein secretion In recent years tremendous advances have been made in our understanding of the biology biochemistry and biophysics of function of molecular chaperones In addition recent technical developments in the fields of proteomics and genomics allowed us to obtain a global view of chaperone interaction networks Finally there is now a growing interest in the role of molecular chaperones in diseases This book will provide a comprehensive analysis of the structure and function of the diverse systems of molecular chaperones and their role in cell stress responses and in diseases from a global network perspective

Genomics published in 2004 served the purpose of collecting all information on cereal genomics at one place and was well received by the cereal workers through out the world The last eight years have witnessed significant advancement in the field of cereal genomics For instance high density genetic maps physical maps QTL maps and even draft genome sequence have become available for several cereal species Furthermore the next generation sequencing NGS technologies have revolutionized genomics research so that it is possible now to sequence genomes of hundreds or thousands of accessions of an individual cereal crop Significant amounts of data generated using these NGS technologies created a demand for computational tools to analyse this massive data In view of these developments the Editors realised that there was a need to have an updated volume on the present status and future prospects of cereal genomics These developments related to technology and the toolshave been documented in this volume thus supplementing our earlier edited volume Cereal Genomics Cereal Genomics II discusses advances in cereal genomics research made during the last eight years and presents state of art cereal genomics and its utilization involving both basic research such as comparative genomics and functional genomics and applied research like QTL mapping and molecular breeding

Yeast Physiology and Biotechnology Graeme M. Walker, 1998-04-08 Yeasts are the world s premier industrial micro organisms In addition to their wide exploitation in the production of foods beverages and pharmaceuticals yeasts also play significant roles as model eukaryotic cells in furthering our knowledge in the biological and biomedical sciences In order for modern biotechnology to fully exploit the activities of yeasts it is essential to appreciate aspects of yeast cell physiology In recent years however our knowledge of yeast physiological phenomena has lagged behind that of yeast genetics and molecular biology Yeast Physiology and Biotechnology redresses the balance by linking key aspects of yeast physiology with yeast biotechnology Individual chapters provide broad and timely coverage of yeast cytology nutrition growth and metabolism important aspects of yeast cell physiology which are pertinent to the practical uses of yeasts in industry The final chapter reviews traditional modern and emerging biotechnologies in which roles of yeasts in the production of industrial commodities and their value in biomedical research are fully discussed Relevant aspects of classical and modern yeast genetics and molecular biology are fully integrated into the appropriate chapters This up to date and fully referenced book is aimed at advanced undergraduate and postgraduate bioscience students but will also prove to be a valuable source of information for yeast researchers and technologists

Determination of Complex Reaction Mechanisms John Ross,Igor Schreiber,Marcel O. Vlad,2006 In a chemical system with many chemical species several questions can be asked what species react with other species in what temporal order and with what results These questions have been asked for over one hundred years about simple and complex chemical systems and the answers constitute the macroscopic reaction mechanism In Determination of Complex Reaction Mechanisms authors John Ross Igor Schreiber and Marcel Vlad present several systematic approaches for obtaining information on the causal connectivity of chemical species on correlations of chemical species on the reaction pathway and on the reaction mechanism

Basic pulse theory is demonstrated and tested in an experiment on glycolysis In a second approach measurements on time series of concentrations are used to construct correlation functions and a theory is developed which shows that from these functions information may be inferred on the reaction pathway the reaction mechanism and the centers of control in that mechanism A third approach is based on application of genetic algorithm methods to the study of the evolutionary development of a reaction mechanism to the attainment given goals in a mechanism and to the determination of a reaction mechanism and rate coefficients by comparison with experiment Responses of non linear systems to pulses or other perturbations are analyzed and mechanisms of oscillatory reactions are presented in detail The concluding chapters give an introduction to bioinformatics and statistical methods for determining reaction mechanisms
