Removal

Warning

Before starting work, ensure the motorcycle is stabilized and adequately supported. This will help prevent it from falling and causing injury to the operator or damage to the motorcycle.

Note

- Either camshaft can be removed from the cylinder head without complete removal of the camshaft drive chain. However, the camshaft drive chain must first be detached from the camshafts.

- Remove the camshaft cover (see page 2-15).

Note

- Turn the engine until the maximum number of camshaft lobes are facing away from the valves. This will prevent the camshafts from springing around when the camshaft drive chain tensioner is removed.

- Remove the camshaft drive chain top part.

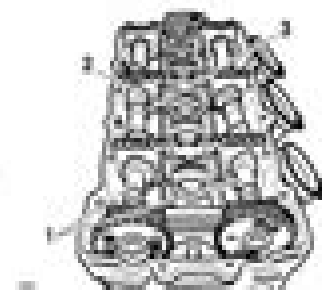

- The part

Caution

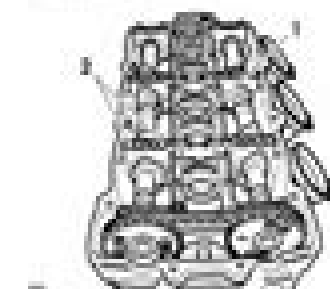

To avoid damage to the camshaft lobes, always ensure as many camshaft lobes as possible are facing away from the valves. This will reduce stress on the camshaft lobes during removal. Damage to the camshaft lobes will result in replacement of the complete head.

- Progressively and evenly release the remaining camshaft lobe springs, half a turn each, until the upward pressure on the ball heads has been released. Always start from the centre of the engine.

- Camshaft

- Wires

- Remove the camshaft drive chain tensioner (see page 2-15).

- Camshaft lobe
- Camshaft lobe spring (2 of 16)

Caution

Failure to release the camshaft lobe springs progressively and evenly may result in damage to the camshaft lobes, the camshafts or the cylinder head cast. A damaged camshaft lobe cannot be replaced as an individual item. It can only be obtained as part of a new cylinder head.

Cylinder Head

- Once all the upward force on the camshaft lobe has been progressively released, unlock all the bolts and remove the lobe.
- Secure the camshaft drive chain to prevent it from falling into the base of the engine.

Note

- The second suppression ball will prevent the camshaft drive chain from falling completely away from the head.
- Lift the camshaft drive chain from one of the camshafts to allow removal of the shaft from the cylinder head.

Removing a Camshaft

- Repeat for the second camshaft.

Camshaft identification

The inlet camshaft can be identified by a groove on a machined surface in its centre. The same surface on the exhaust camshaft is plain.

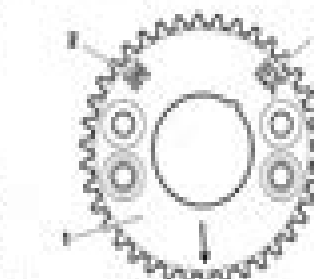

- Inlet camshaft (grooved)
- Exhaust camshaft (plain)

Camshaft sprocket orientation

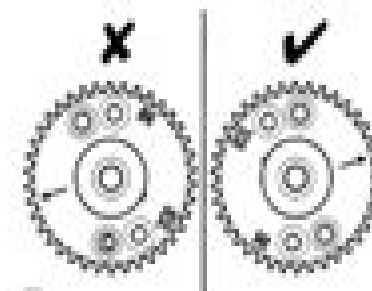

The same drive sprocket is used for both inlet and exhaust camshafts.

To attach the sprocket in the correct relationship to the camshafts, two pairs of offset bolt holes are used, with inlet and exhaust bolt holes being clearly marked (IN for inlet and EX for exhaust). The holes will also prevent the sprockets from being fitted 180° out of alignment.

- Sprocket
- IN marking
- EX marking

To fit a sprocket to an inlet camshaft, position the sprocket to the camshaft and align the hole marked 'IN' with one of the threaded holes in the camshaft. If both bolt holes in the camshaft line up correctly with the holes in the sprocket, the sprocket is in the correct place. If the holes do not line up, then the sprocket should be rotated by a half turn.
